

One-Point Perspective

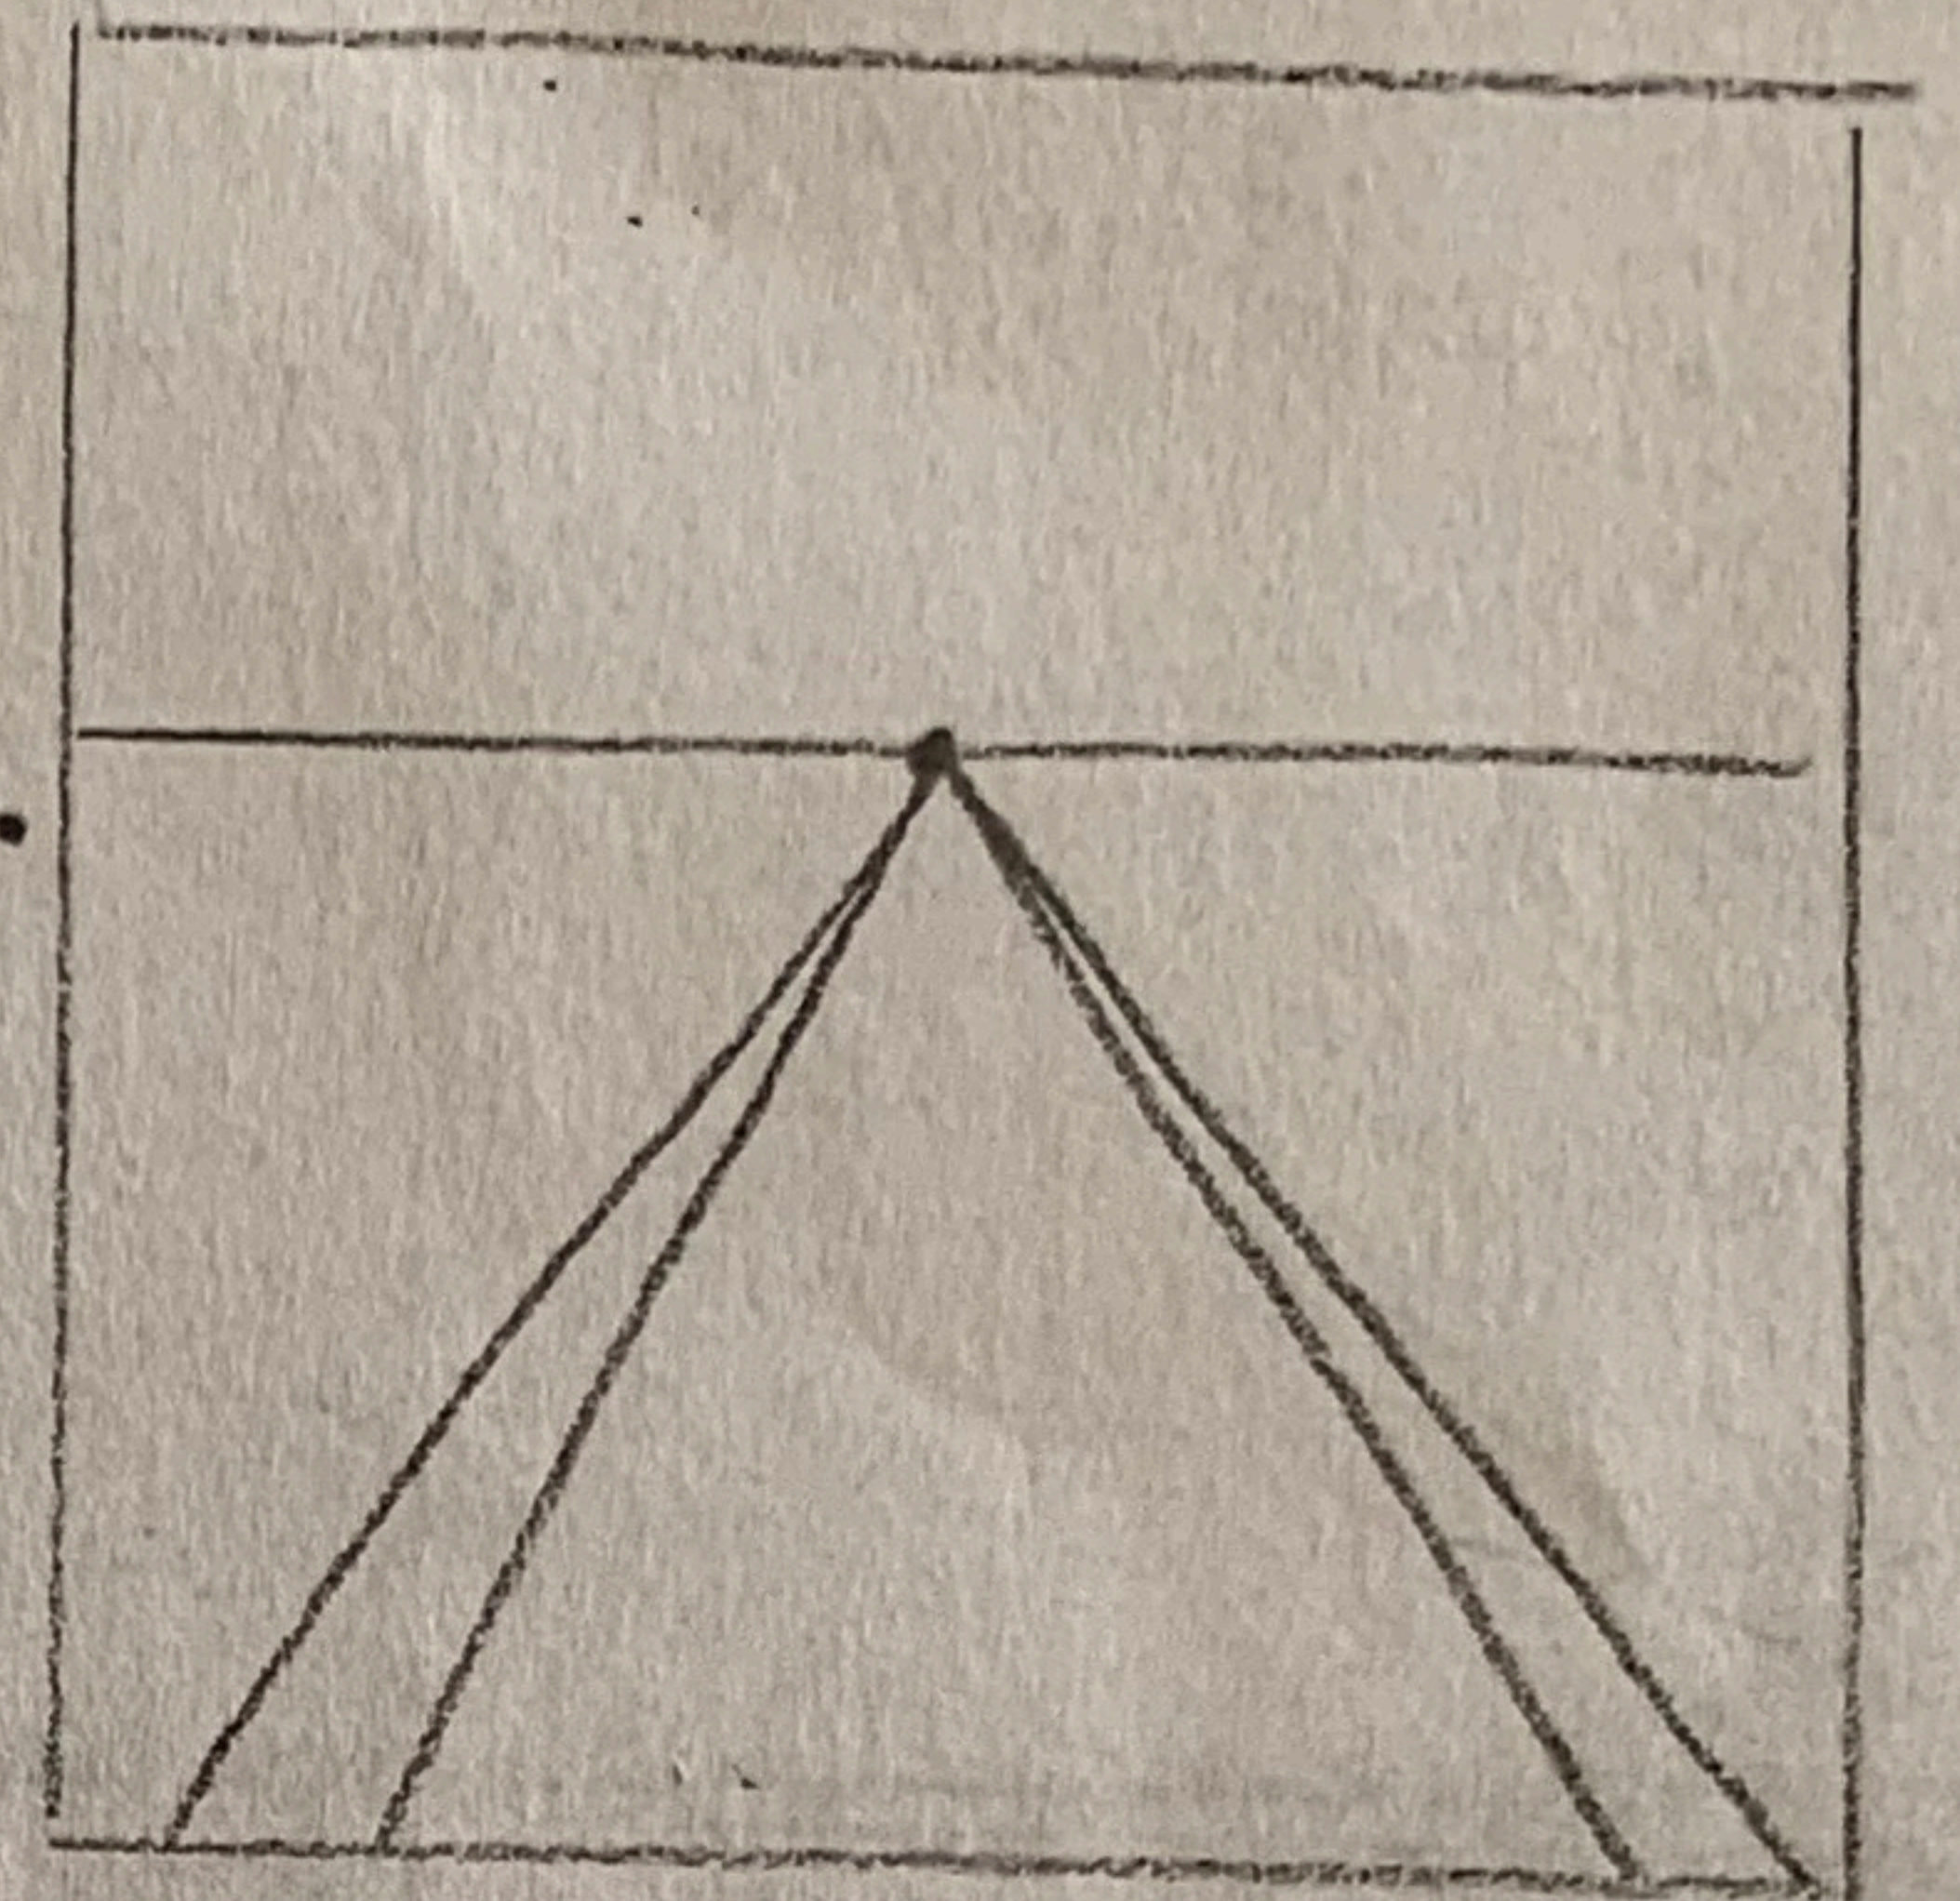

Buildings

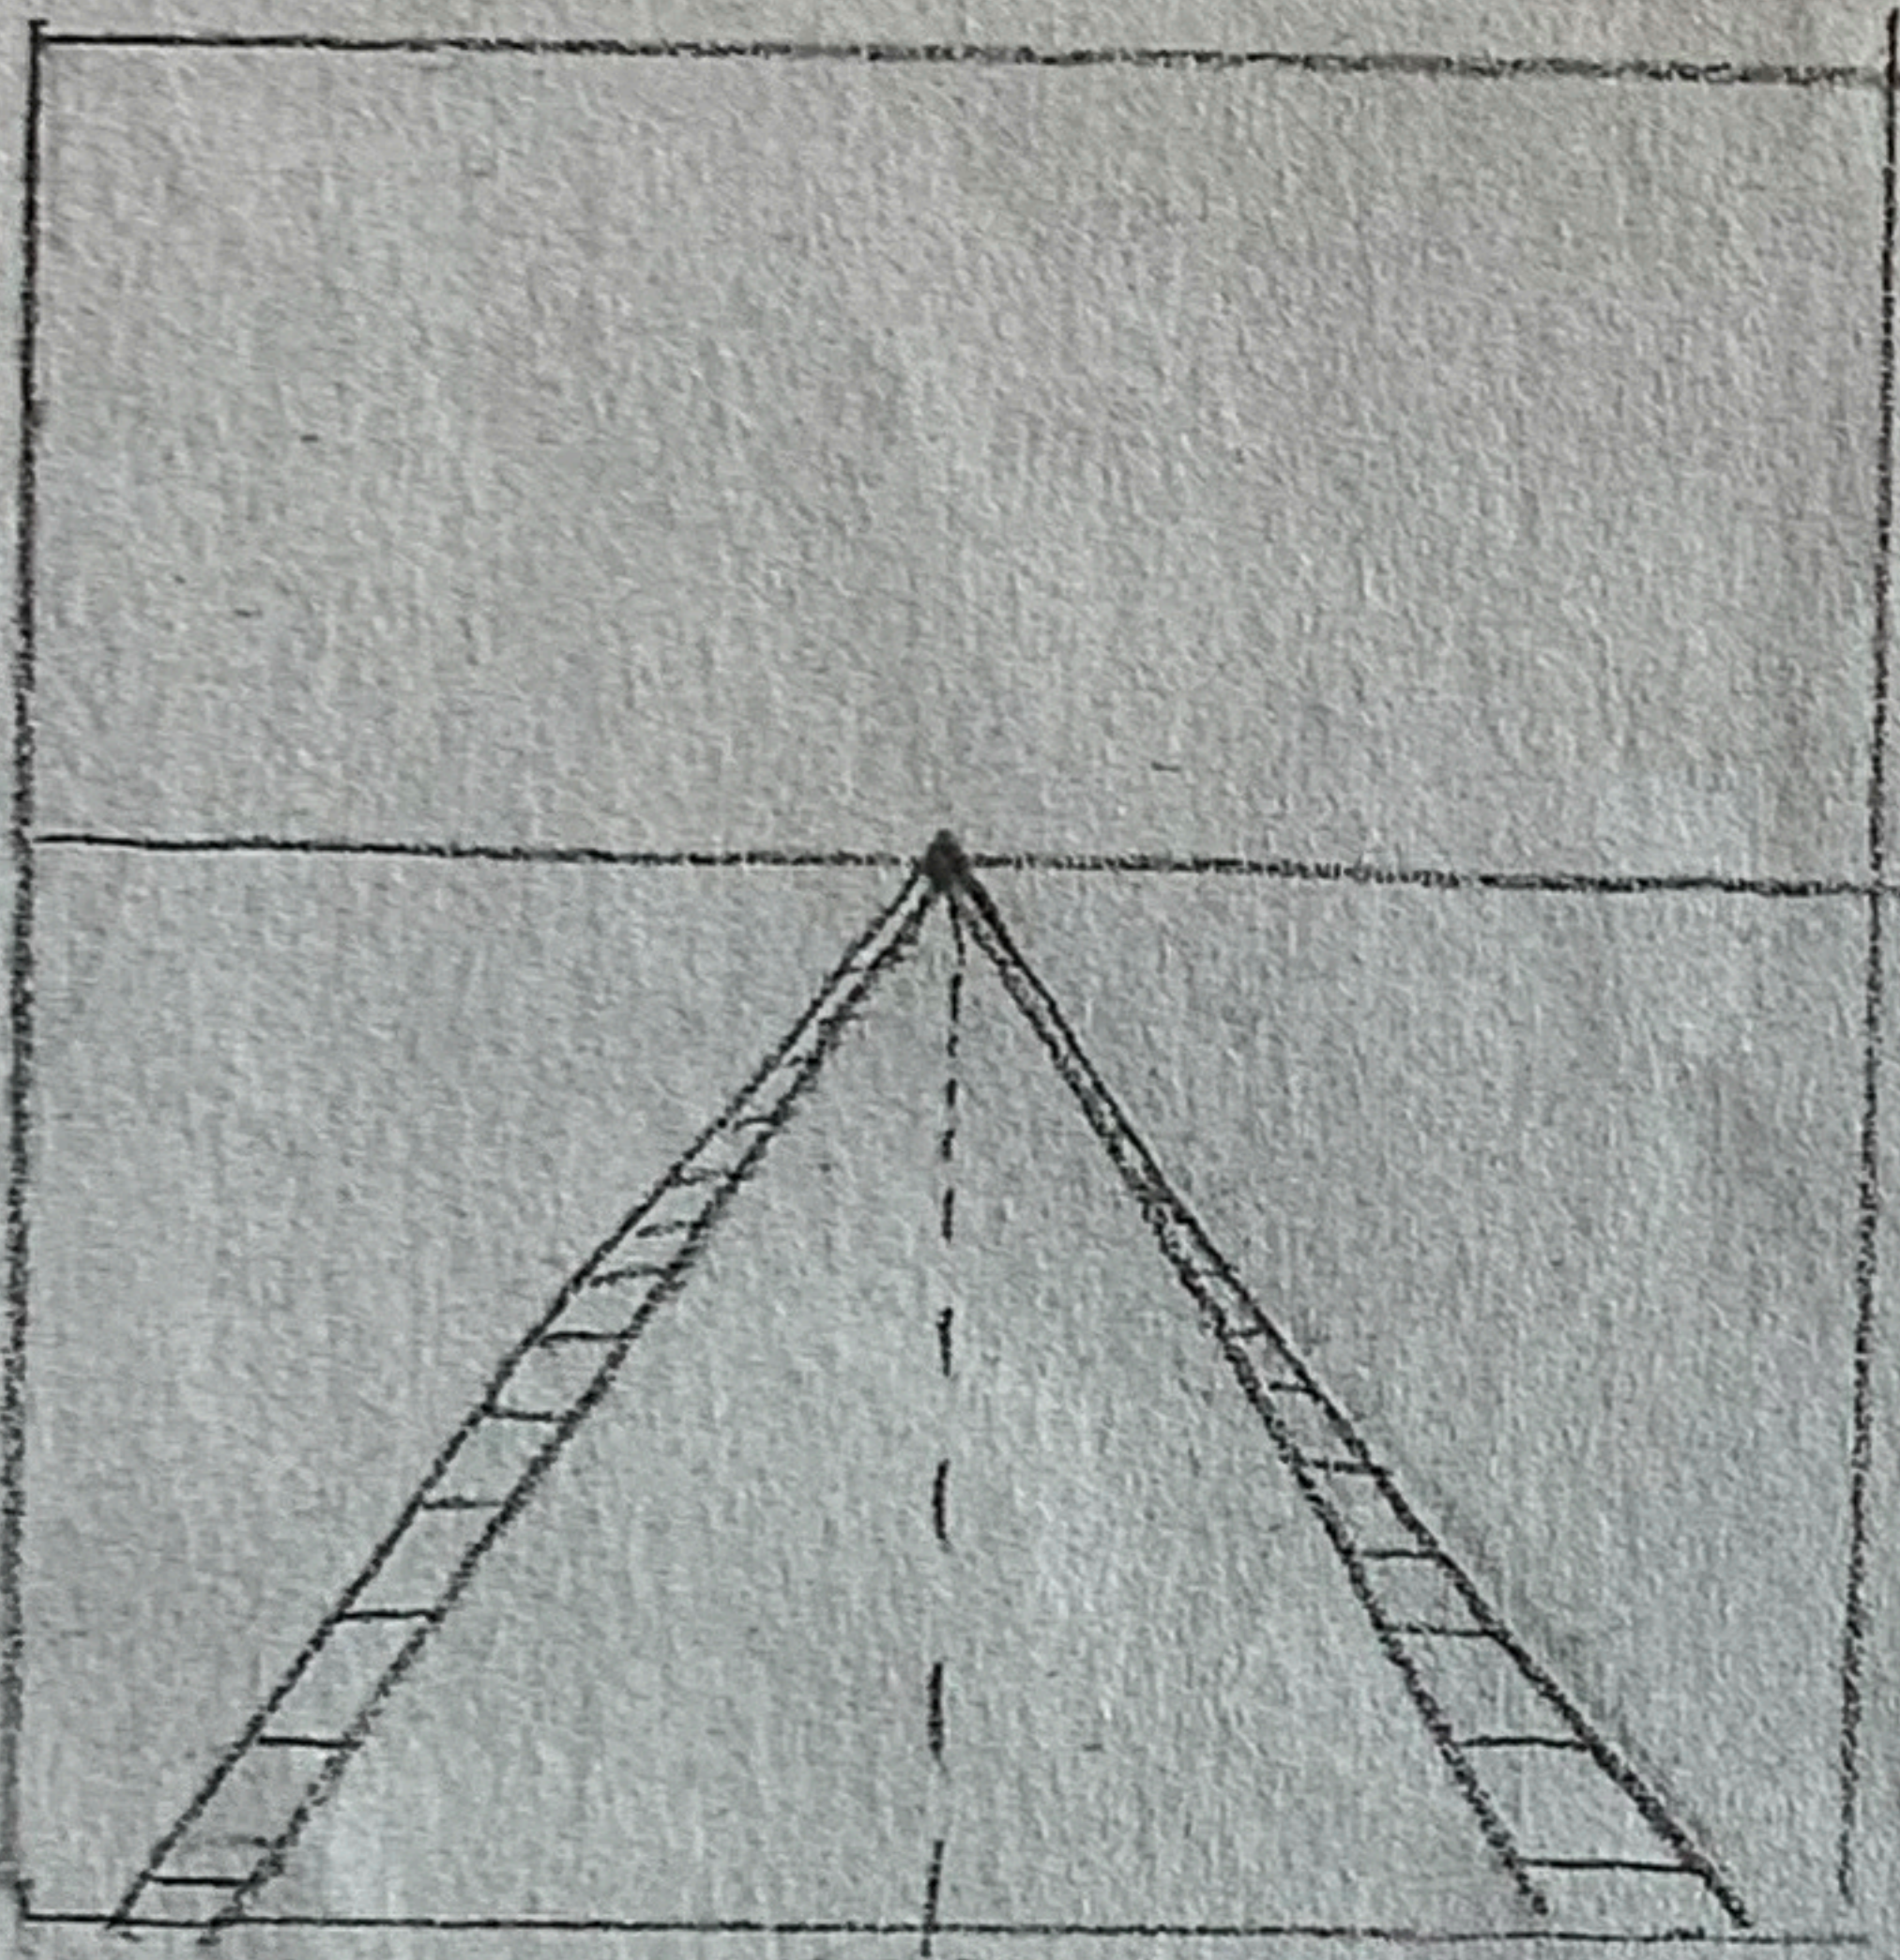

Horizon line & vanishing point

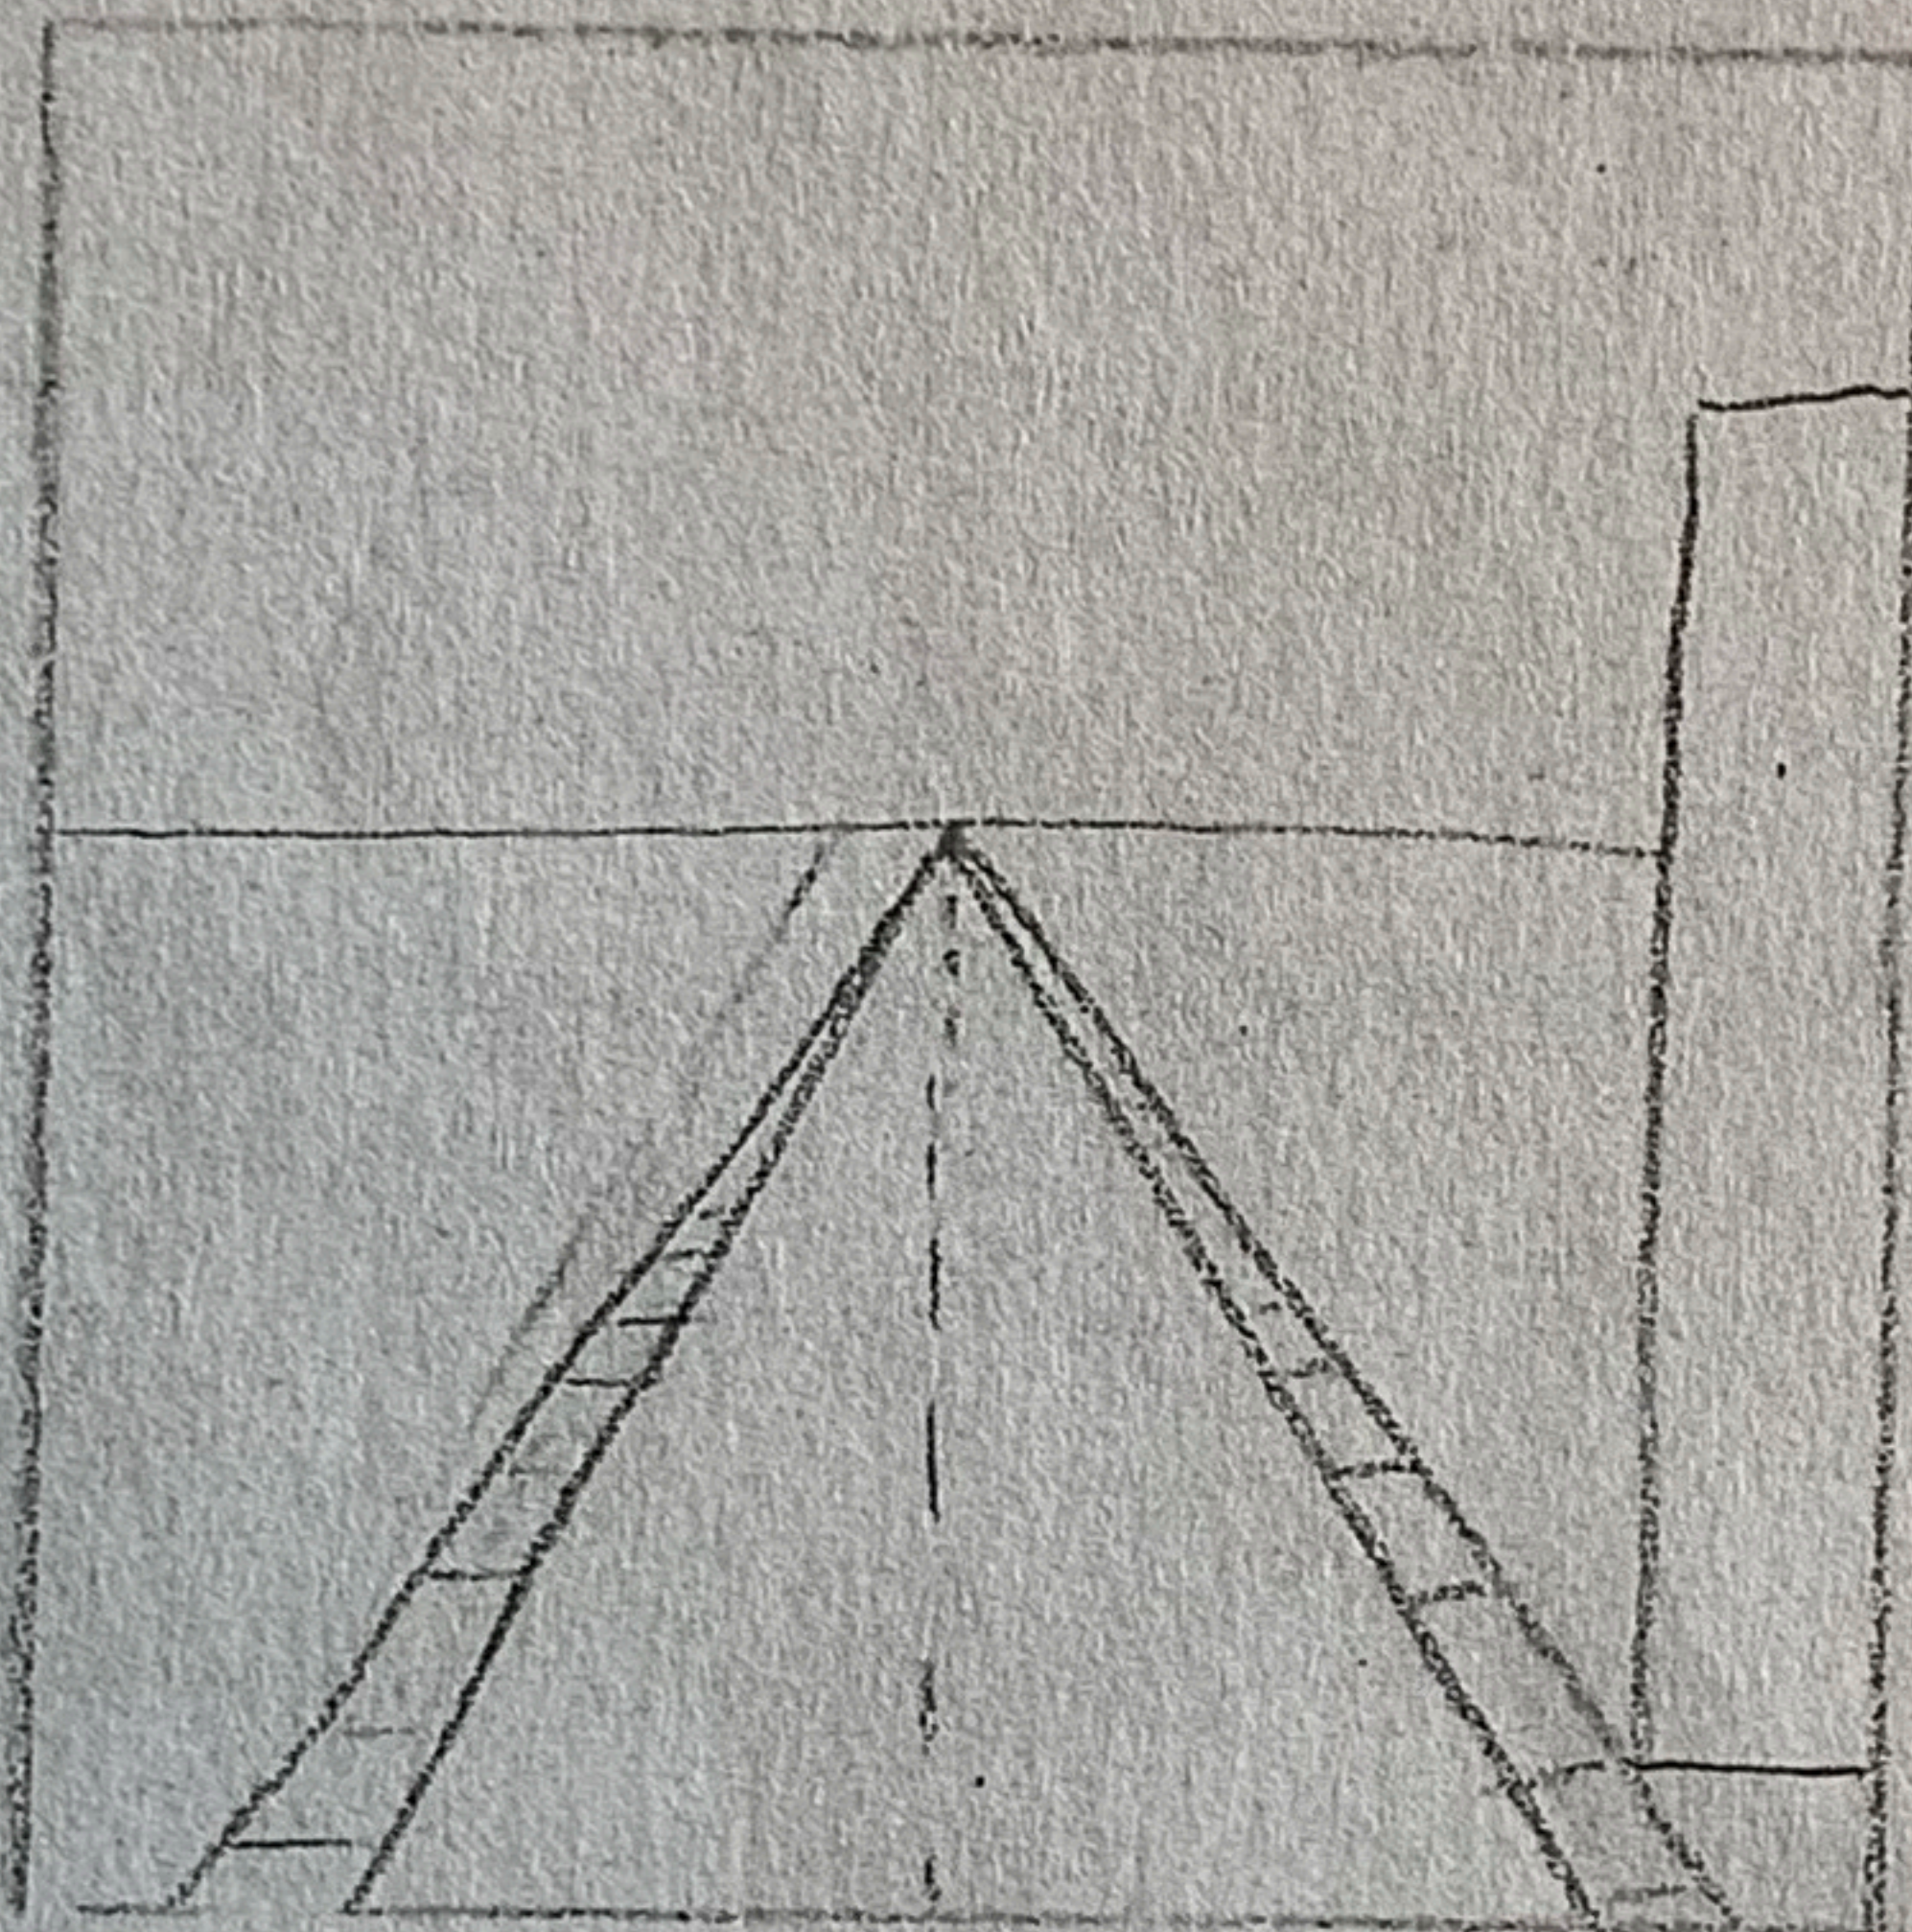

Connect 2 line to vanishing point for the road

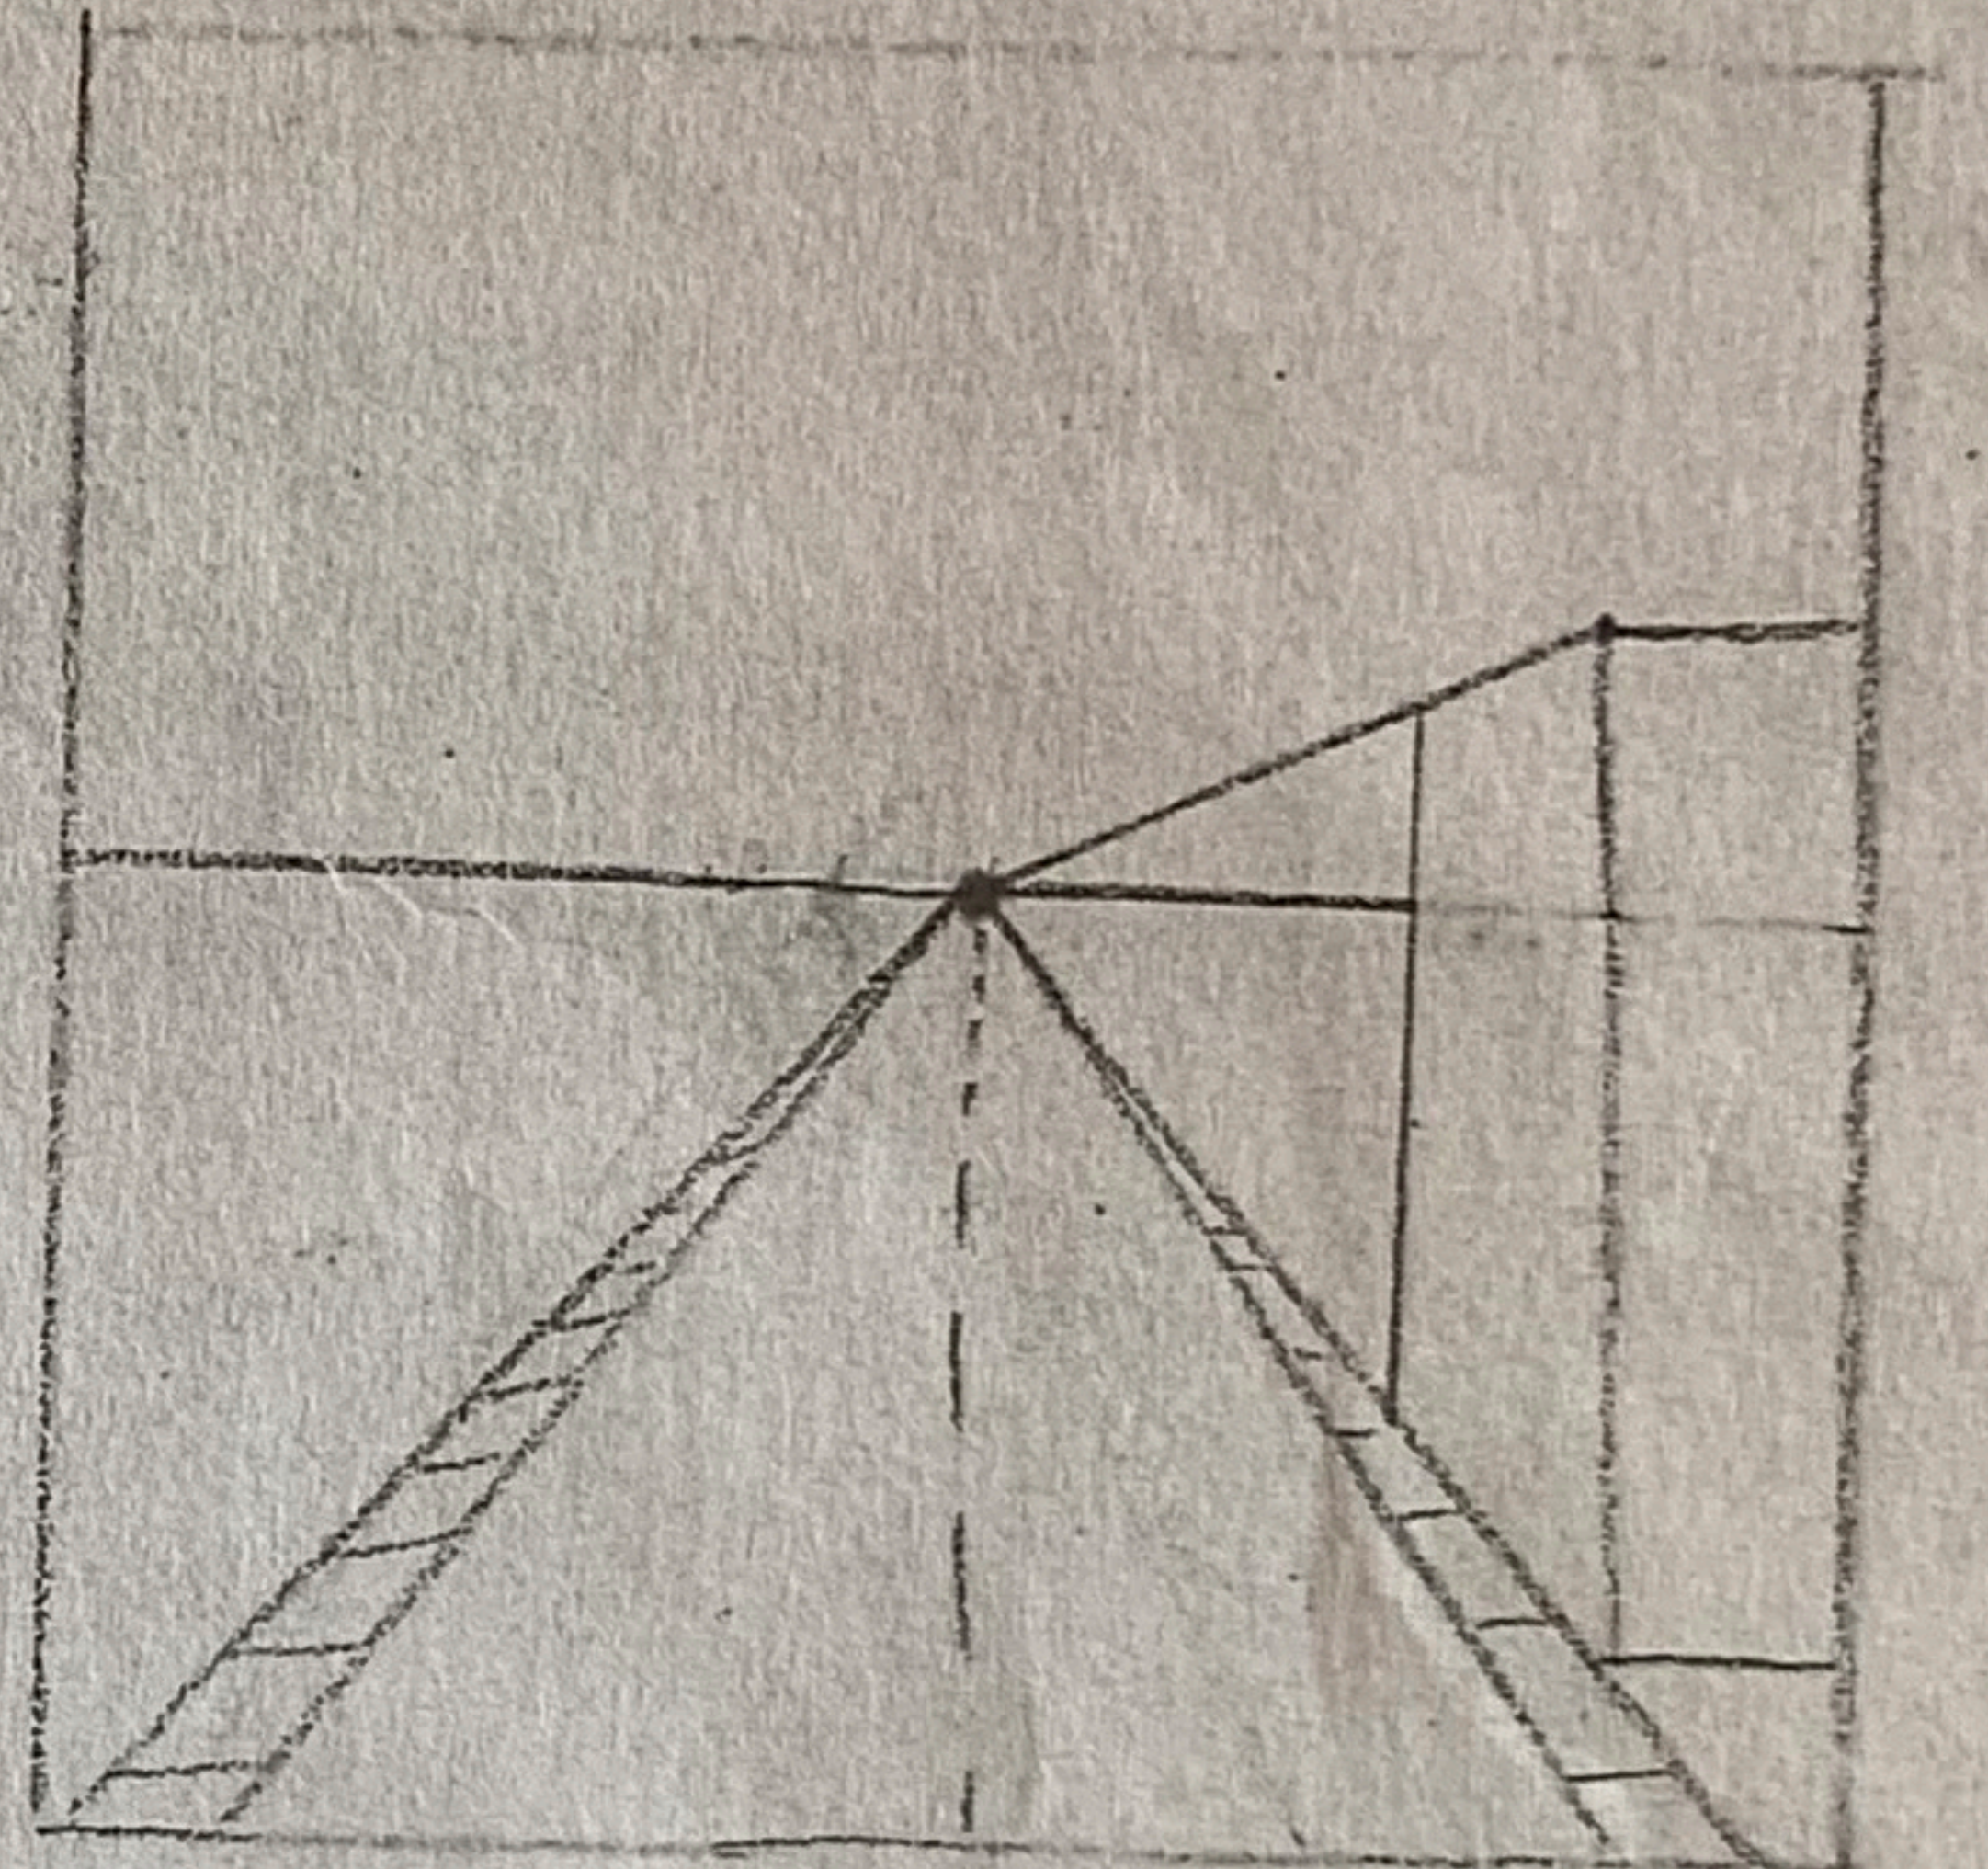

Add a second line for a sidewalk

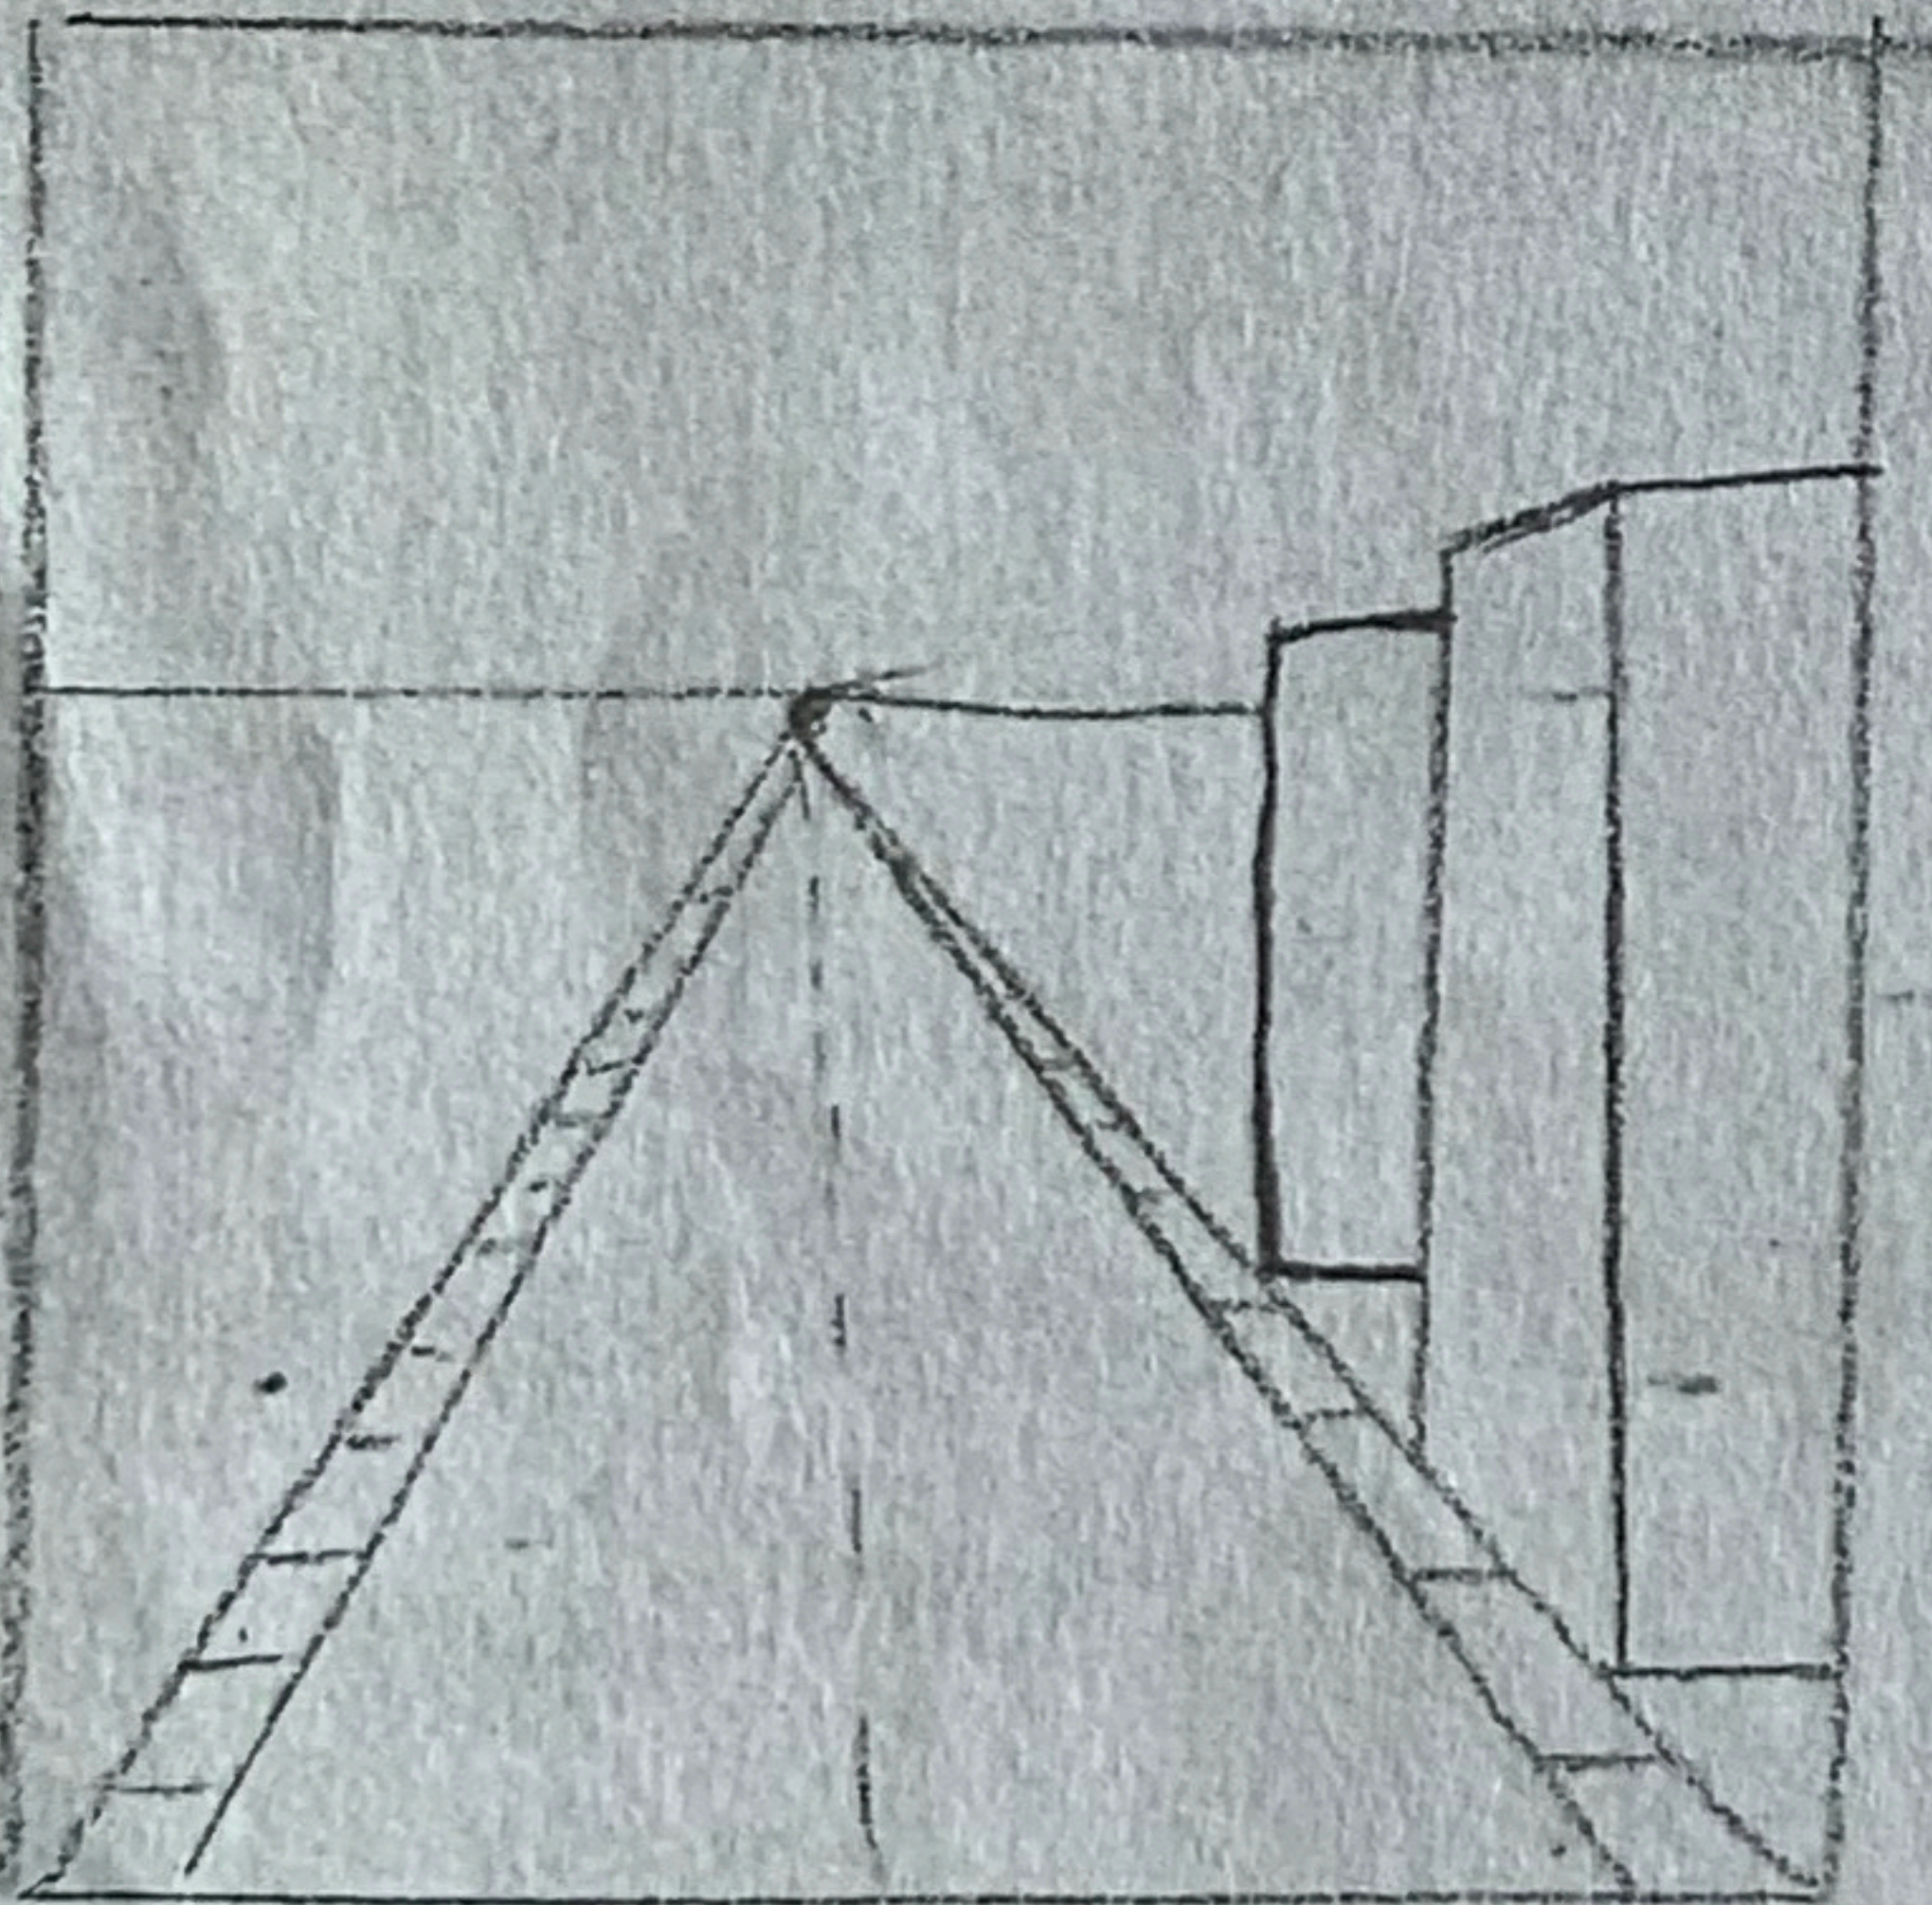

Add HORIZONTAL lines on sidewalk and VERTICAL lines on road

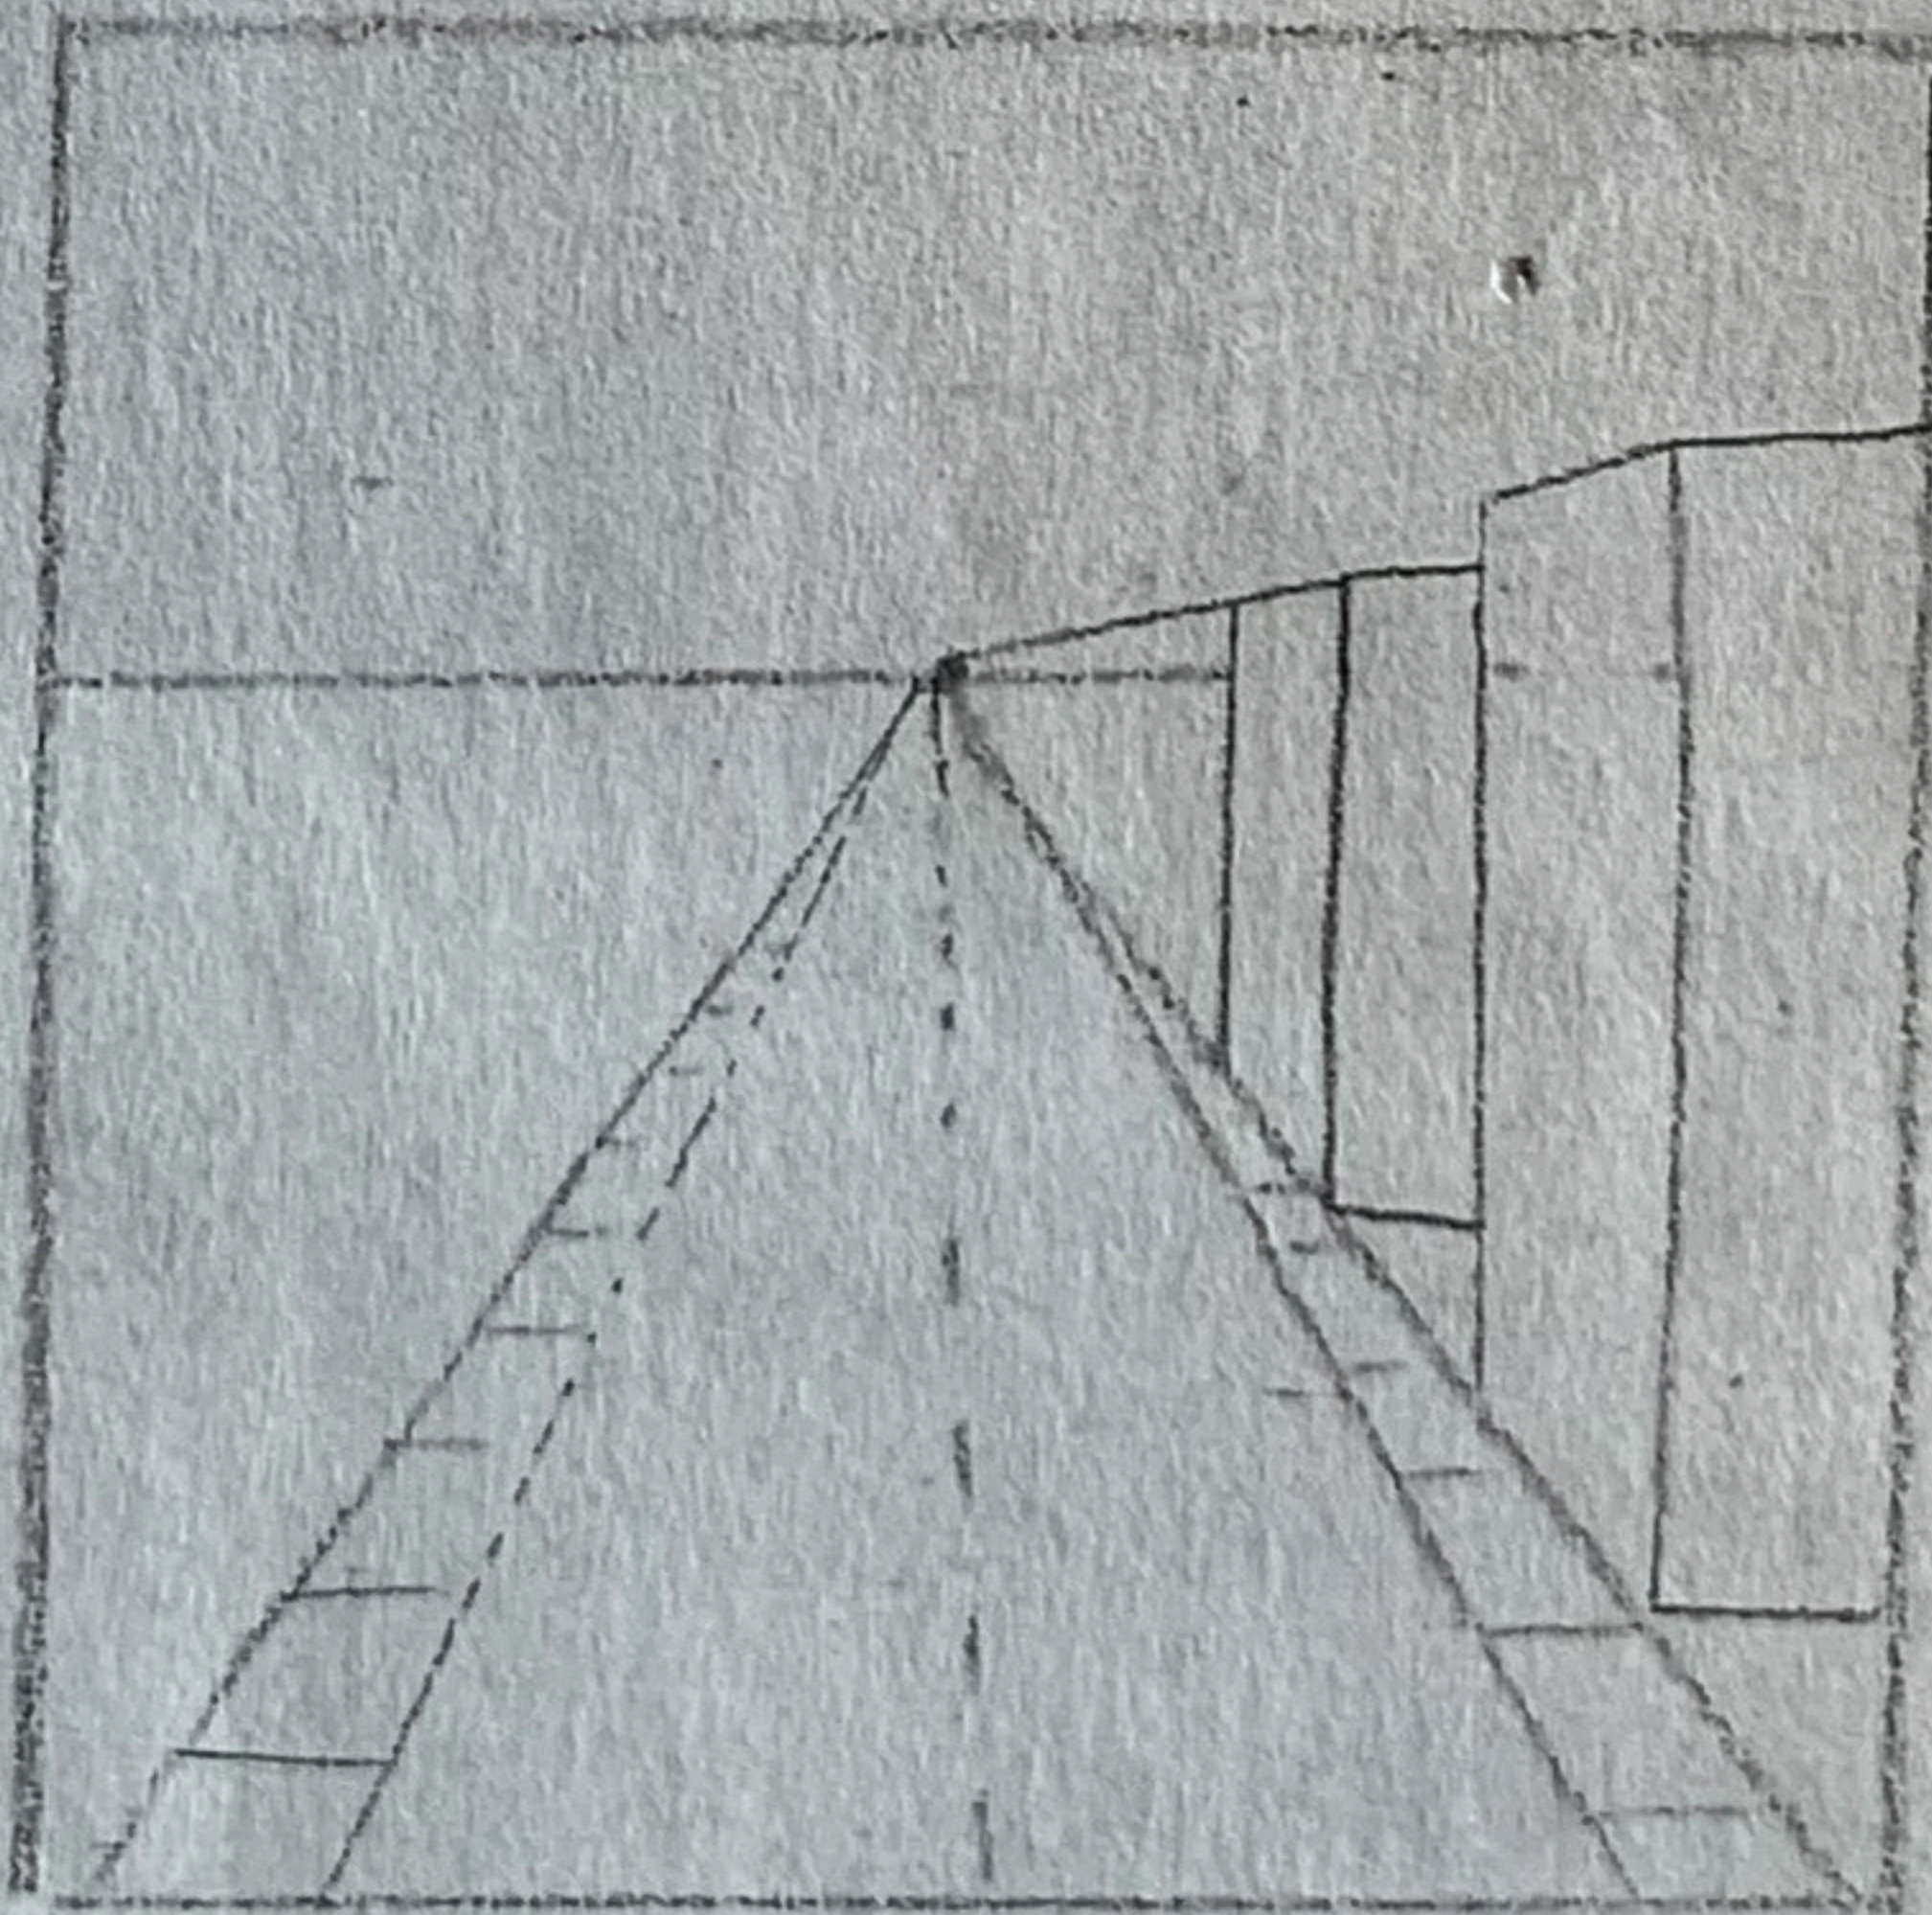

Draw a rectangle on the edge of your paper, erase the horizon line in the middle

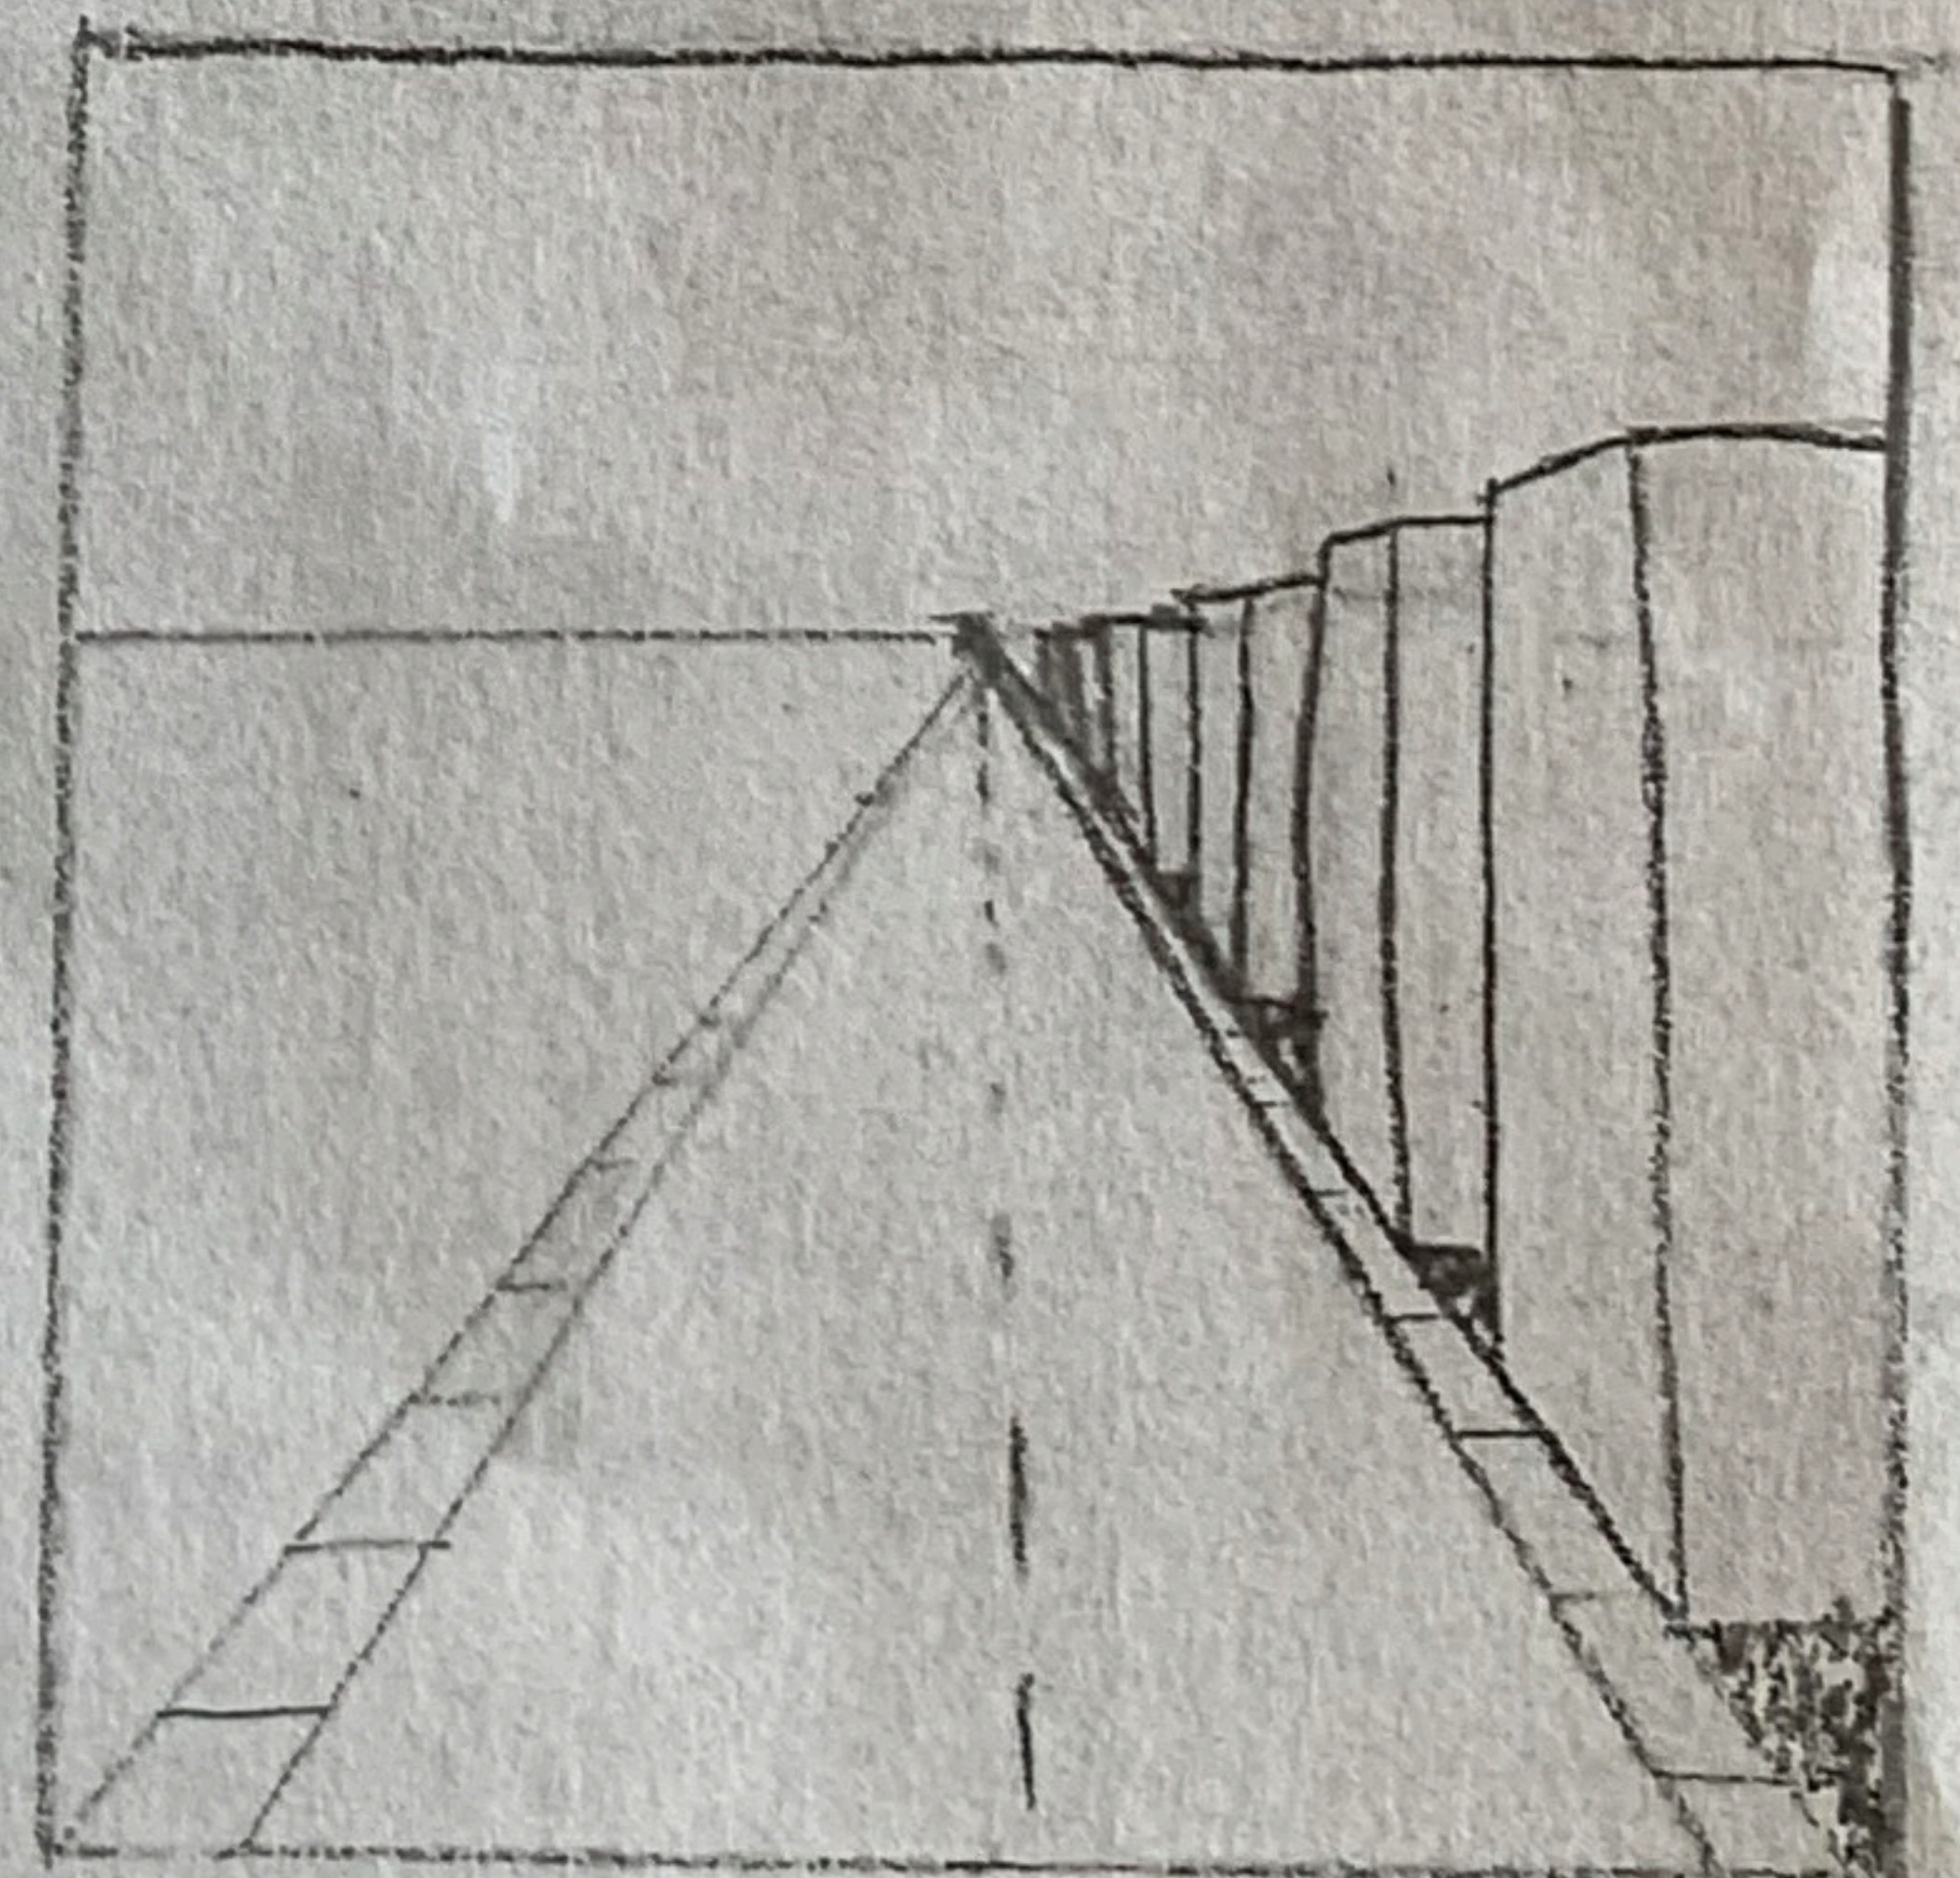

Connect top corner of rectangle to vanishing point and draw a vertical line for the side of building. Erase horizon line inside.

Erase converging line and draw another rectangle attached to your first building. Don't forget the straight edge at the bottom!

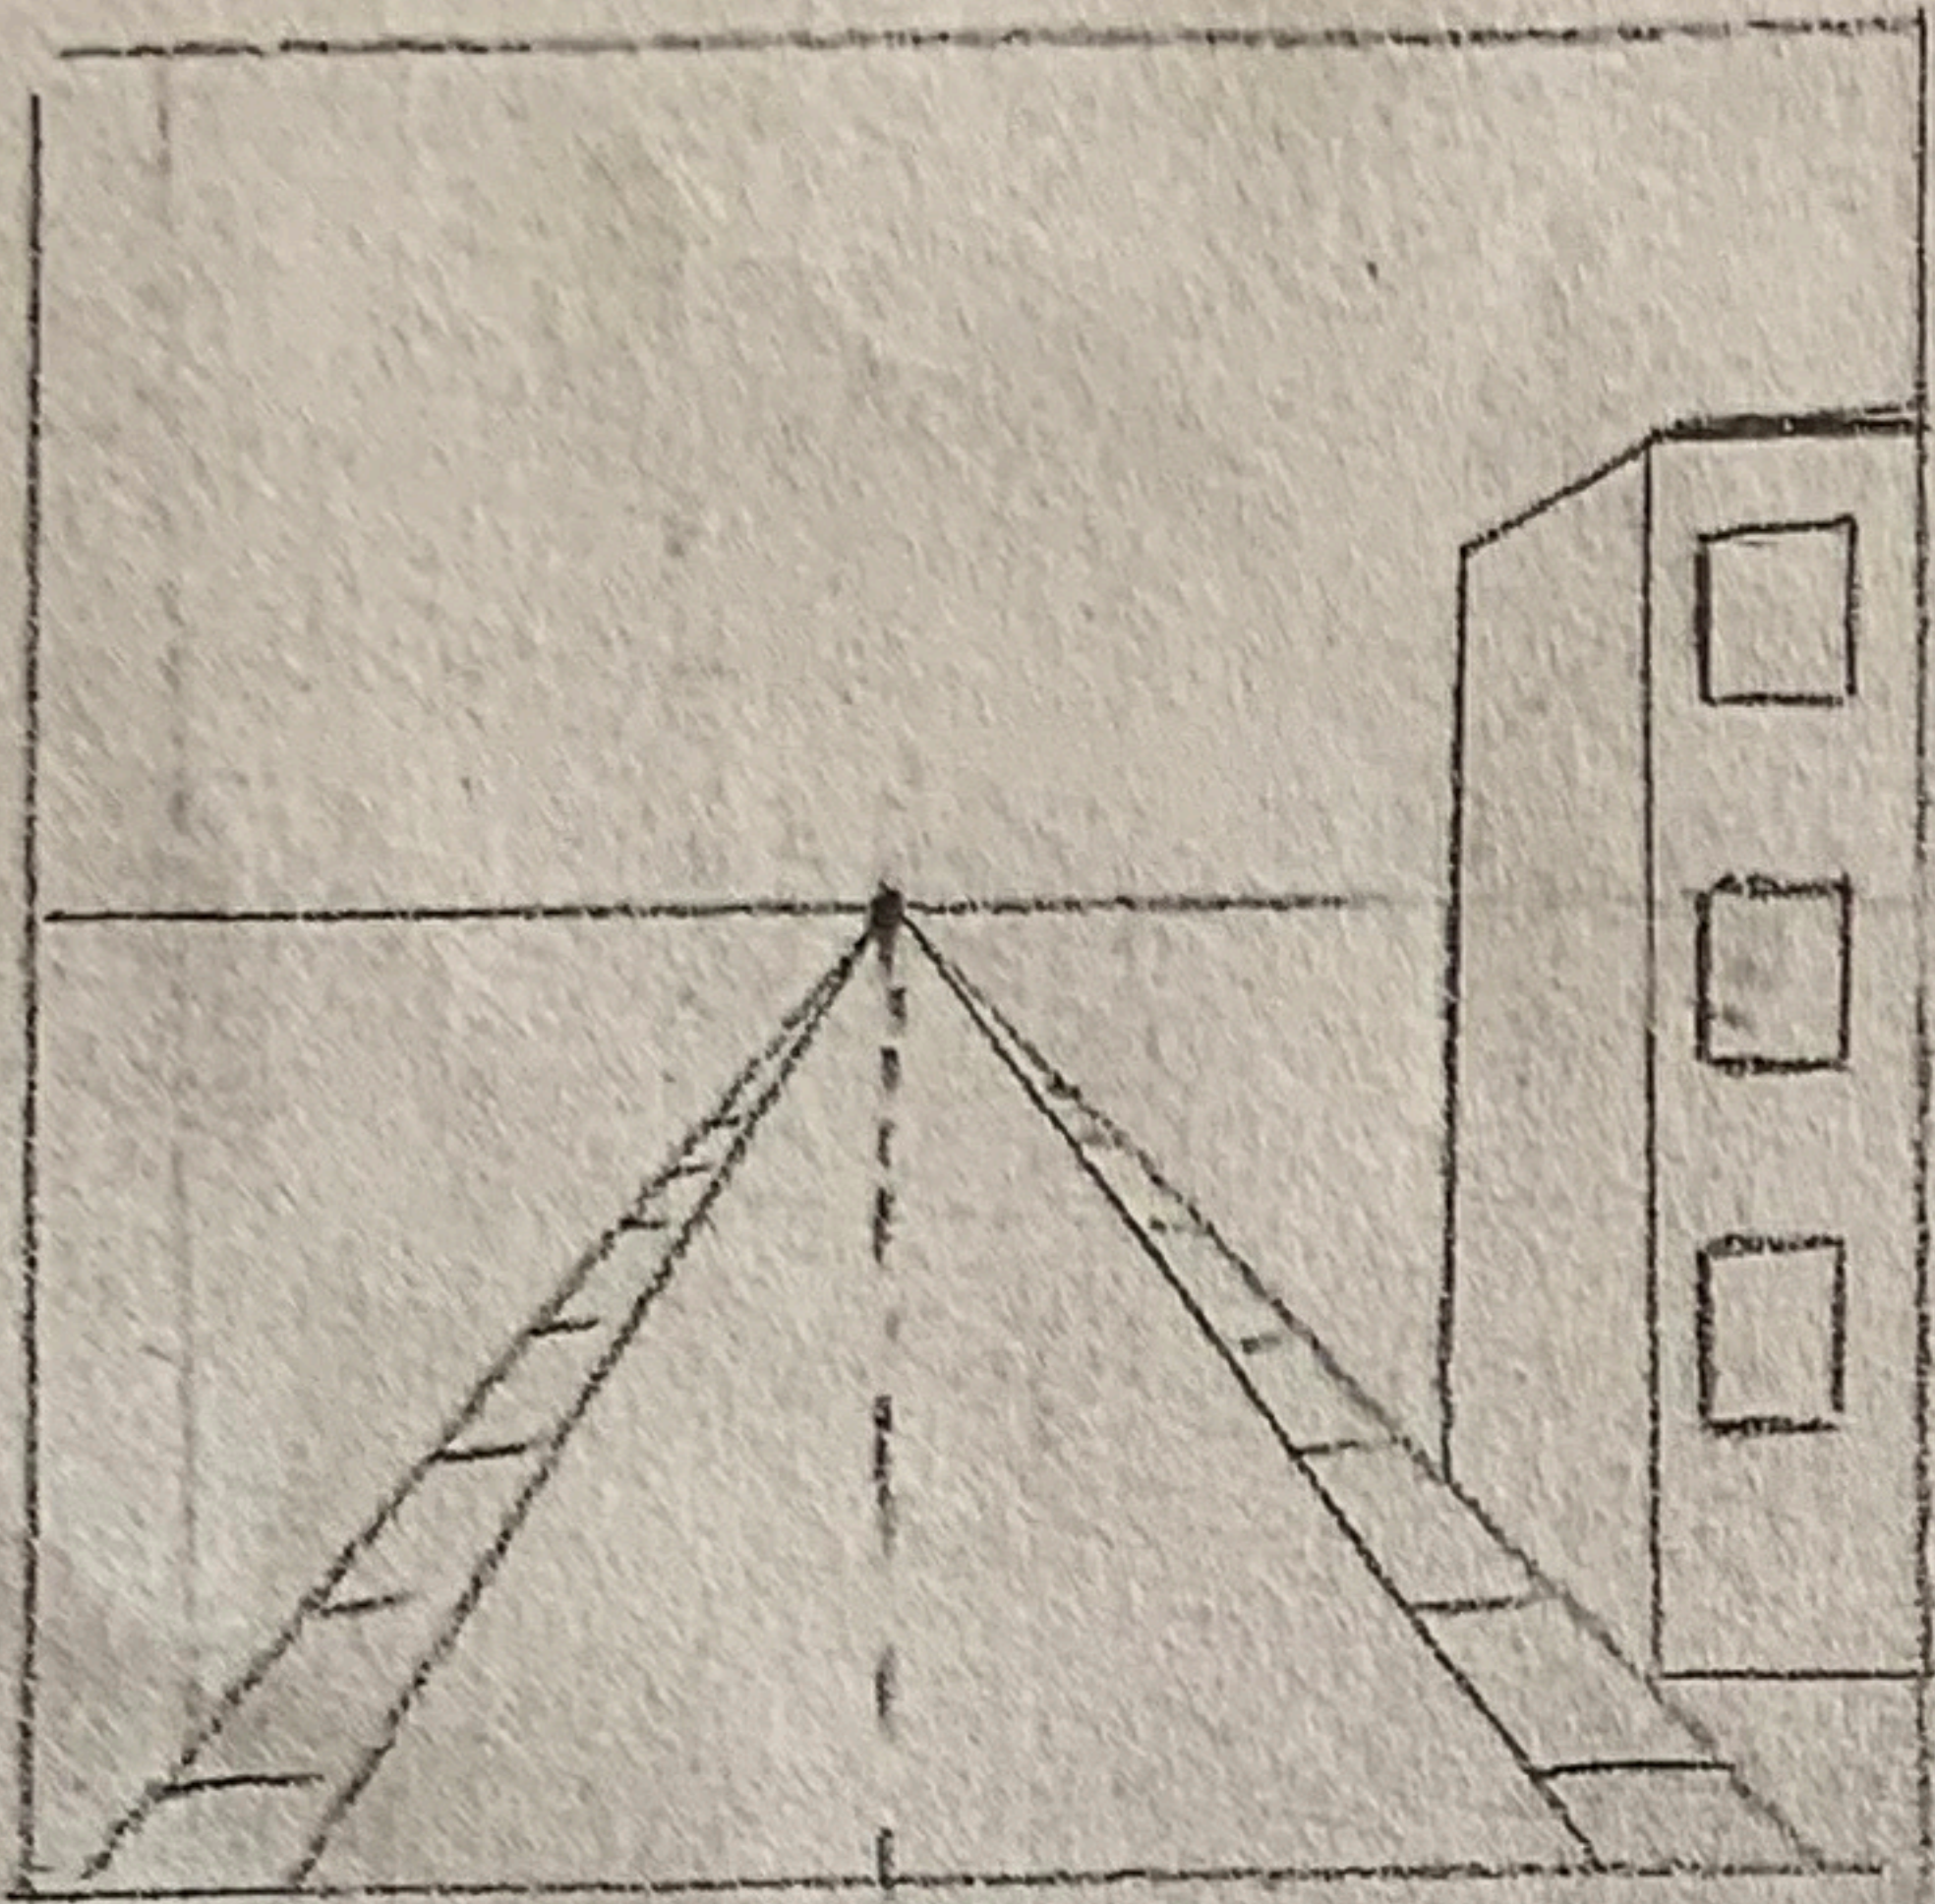

Connect top corner of rectangle to vanishing point, draw vertical line for edge of building. Erase horizon line inside

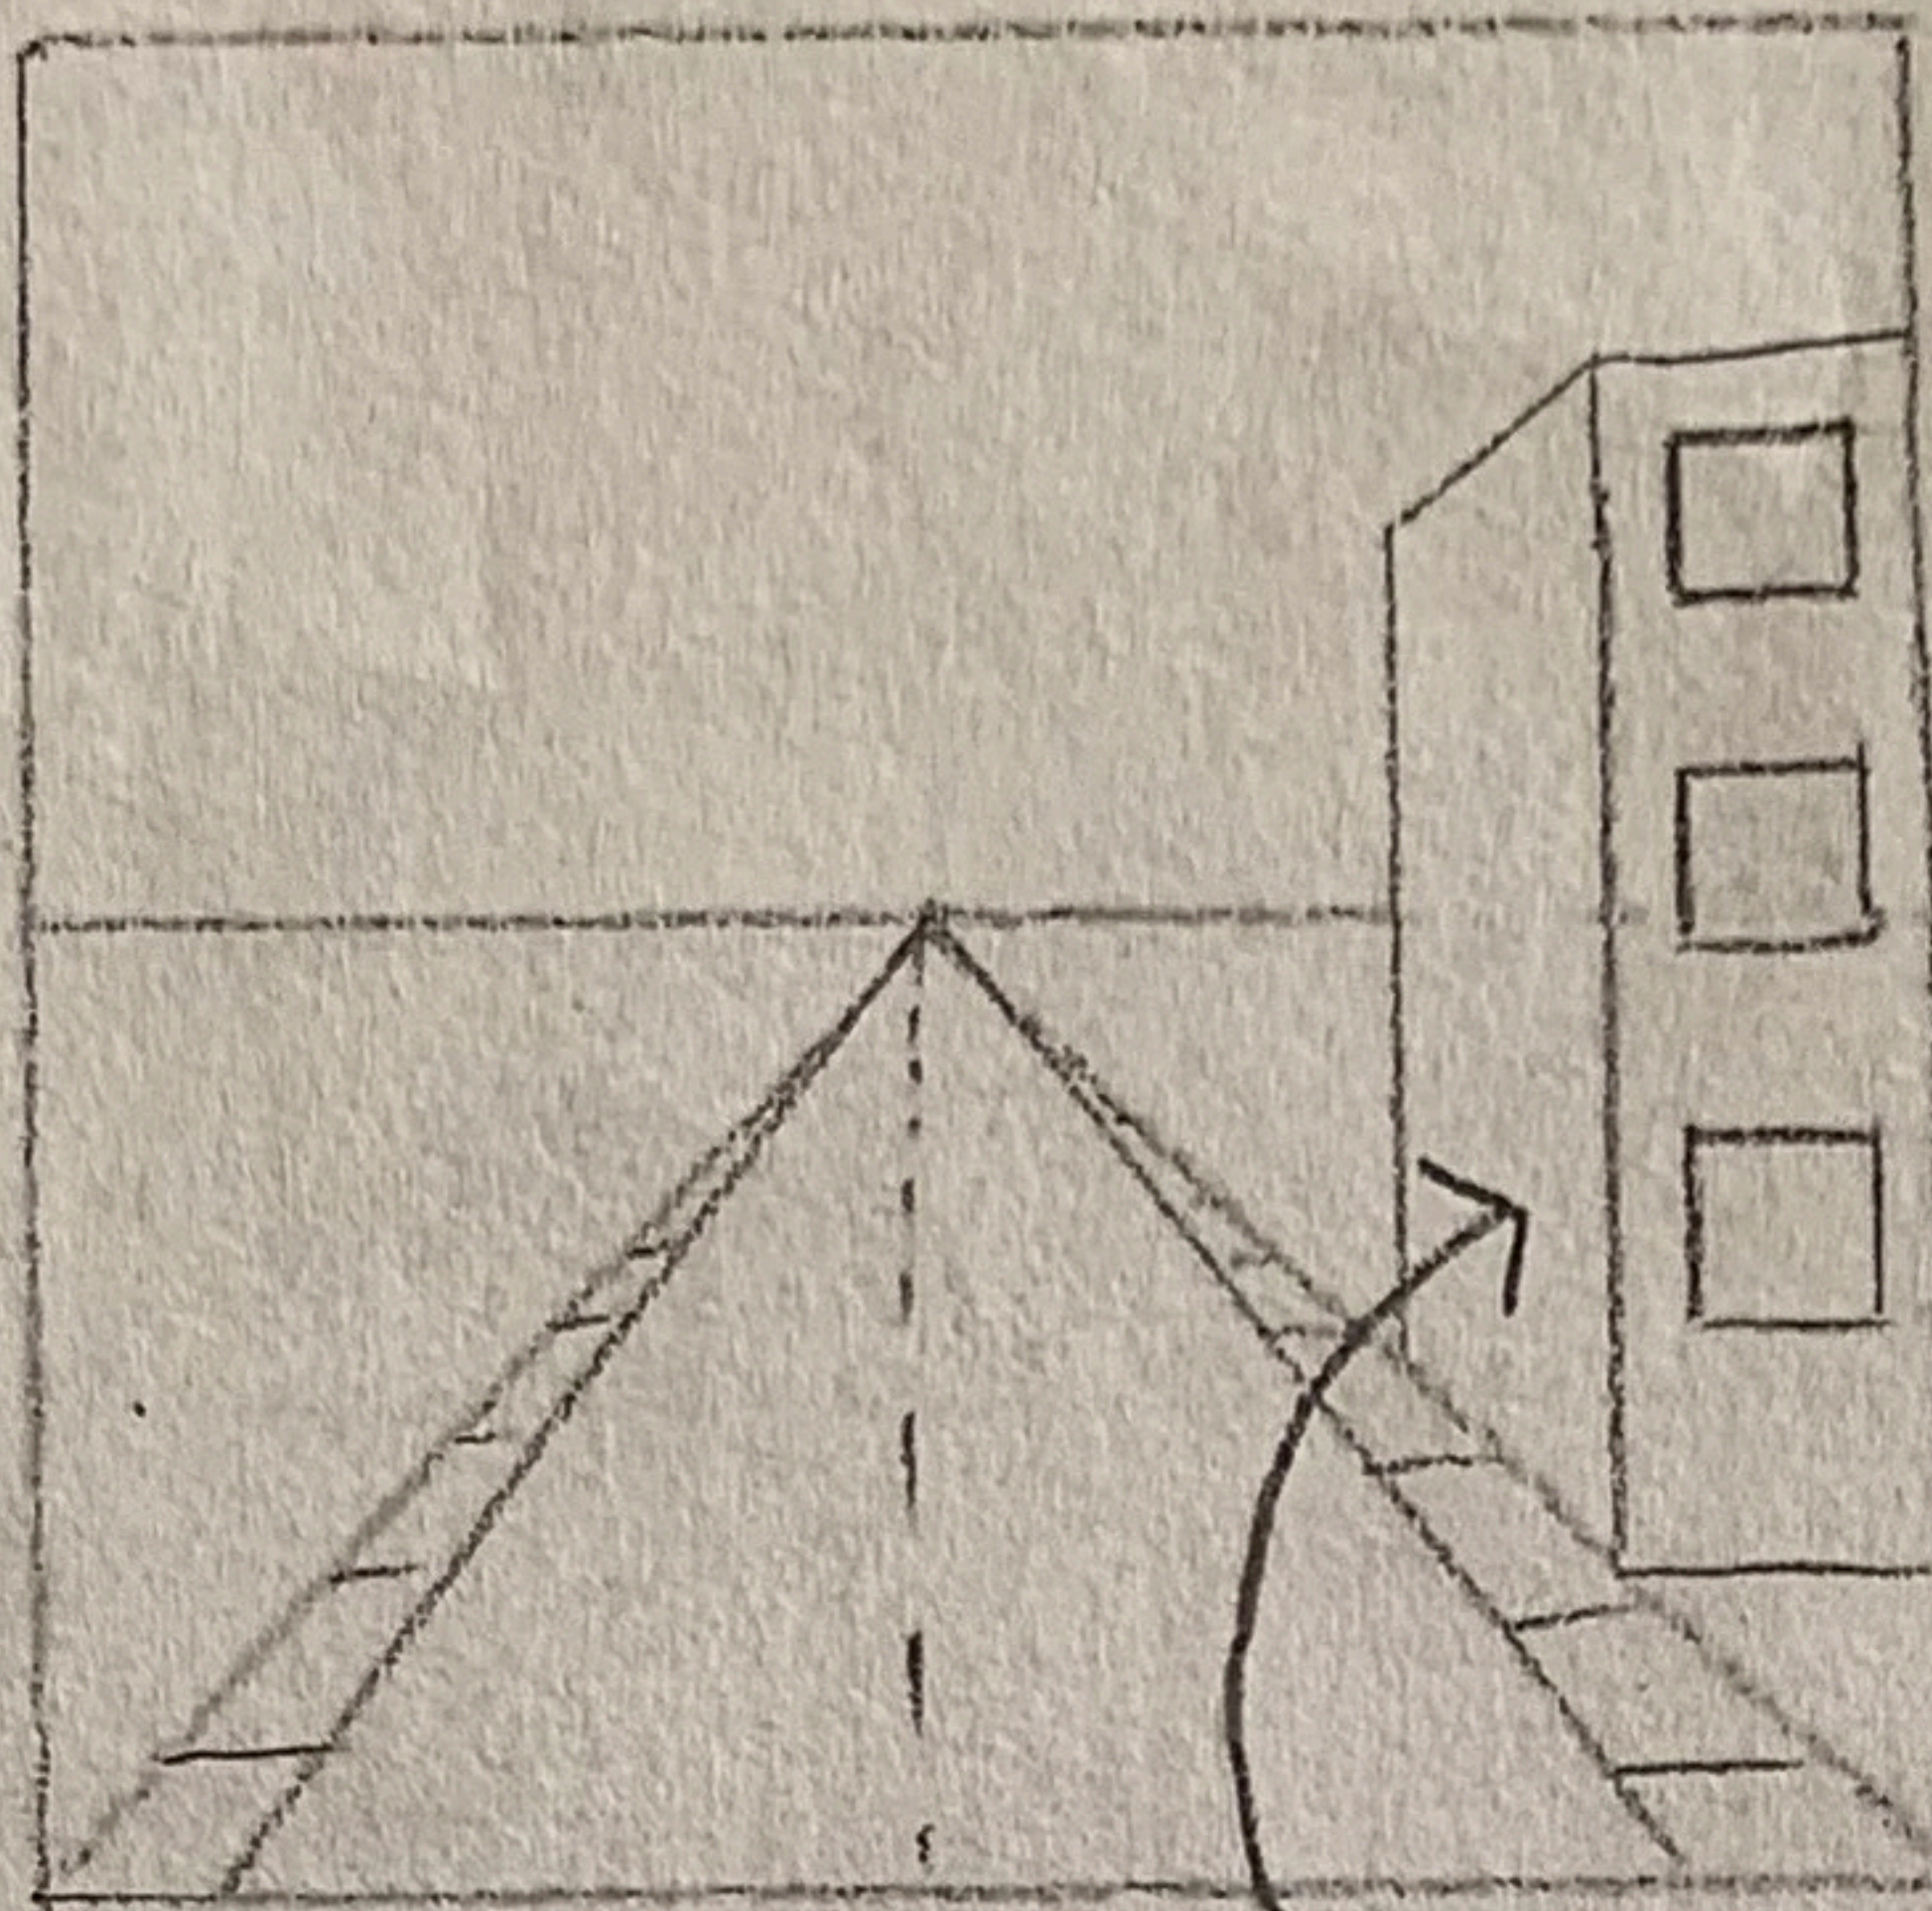

Draw another rectangle next to your second building. Don't forget the straight bottom! Attach top corner to vanishing point, draw vertical line for side and erase. Continue!

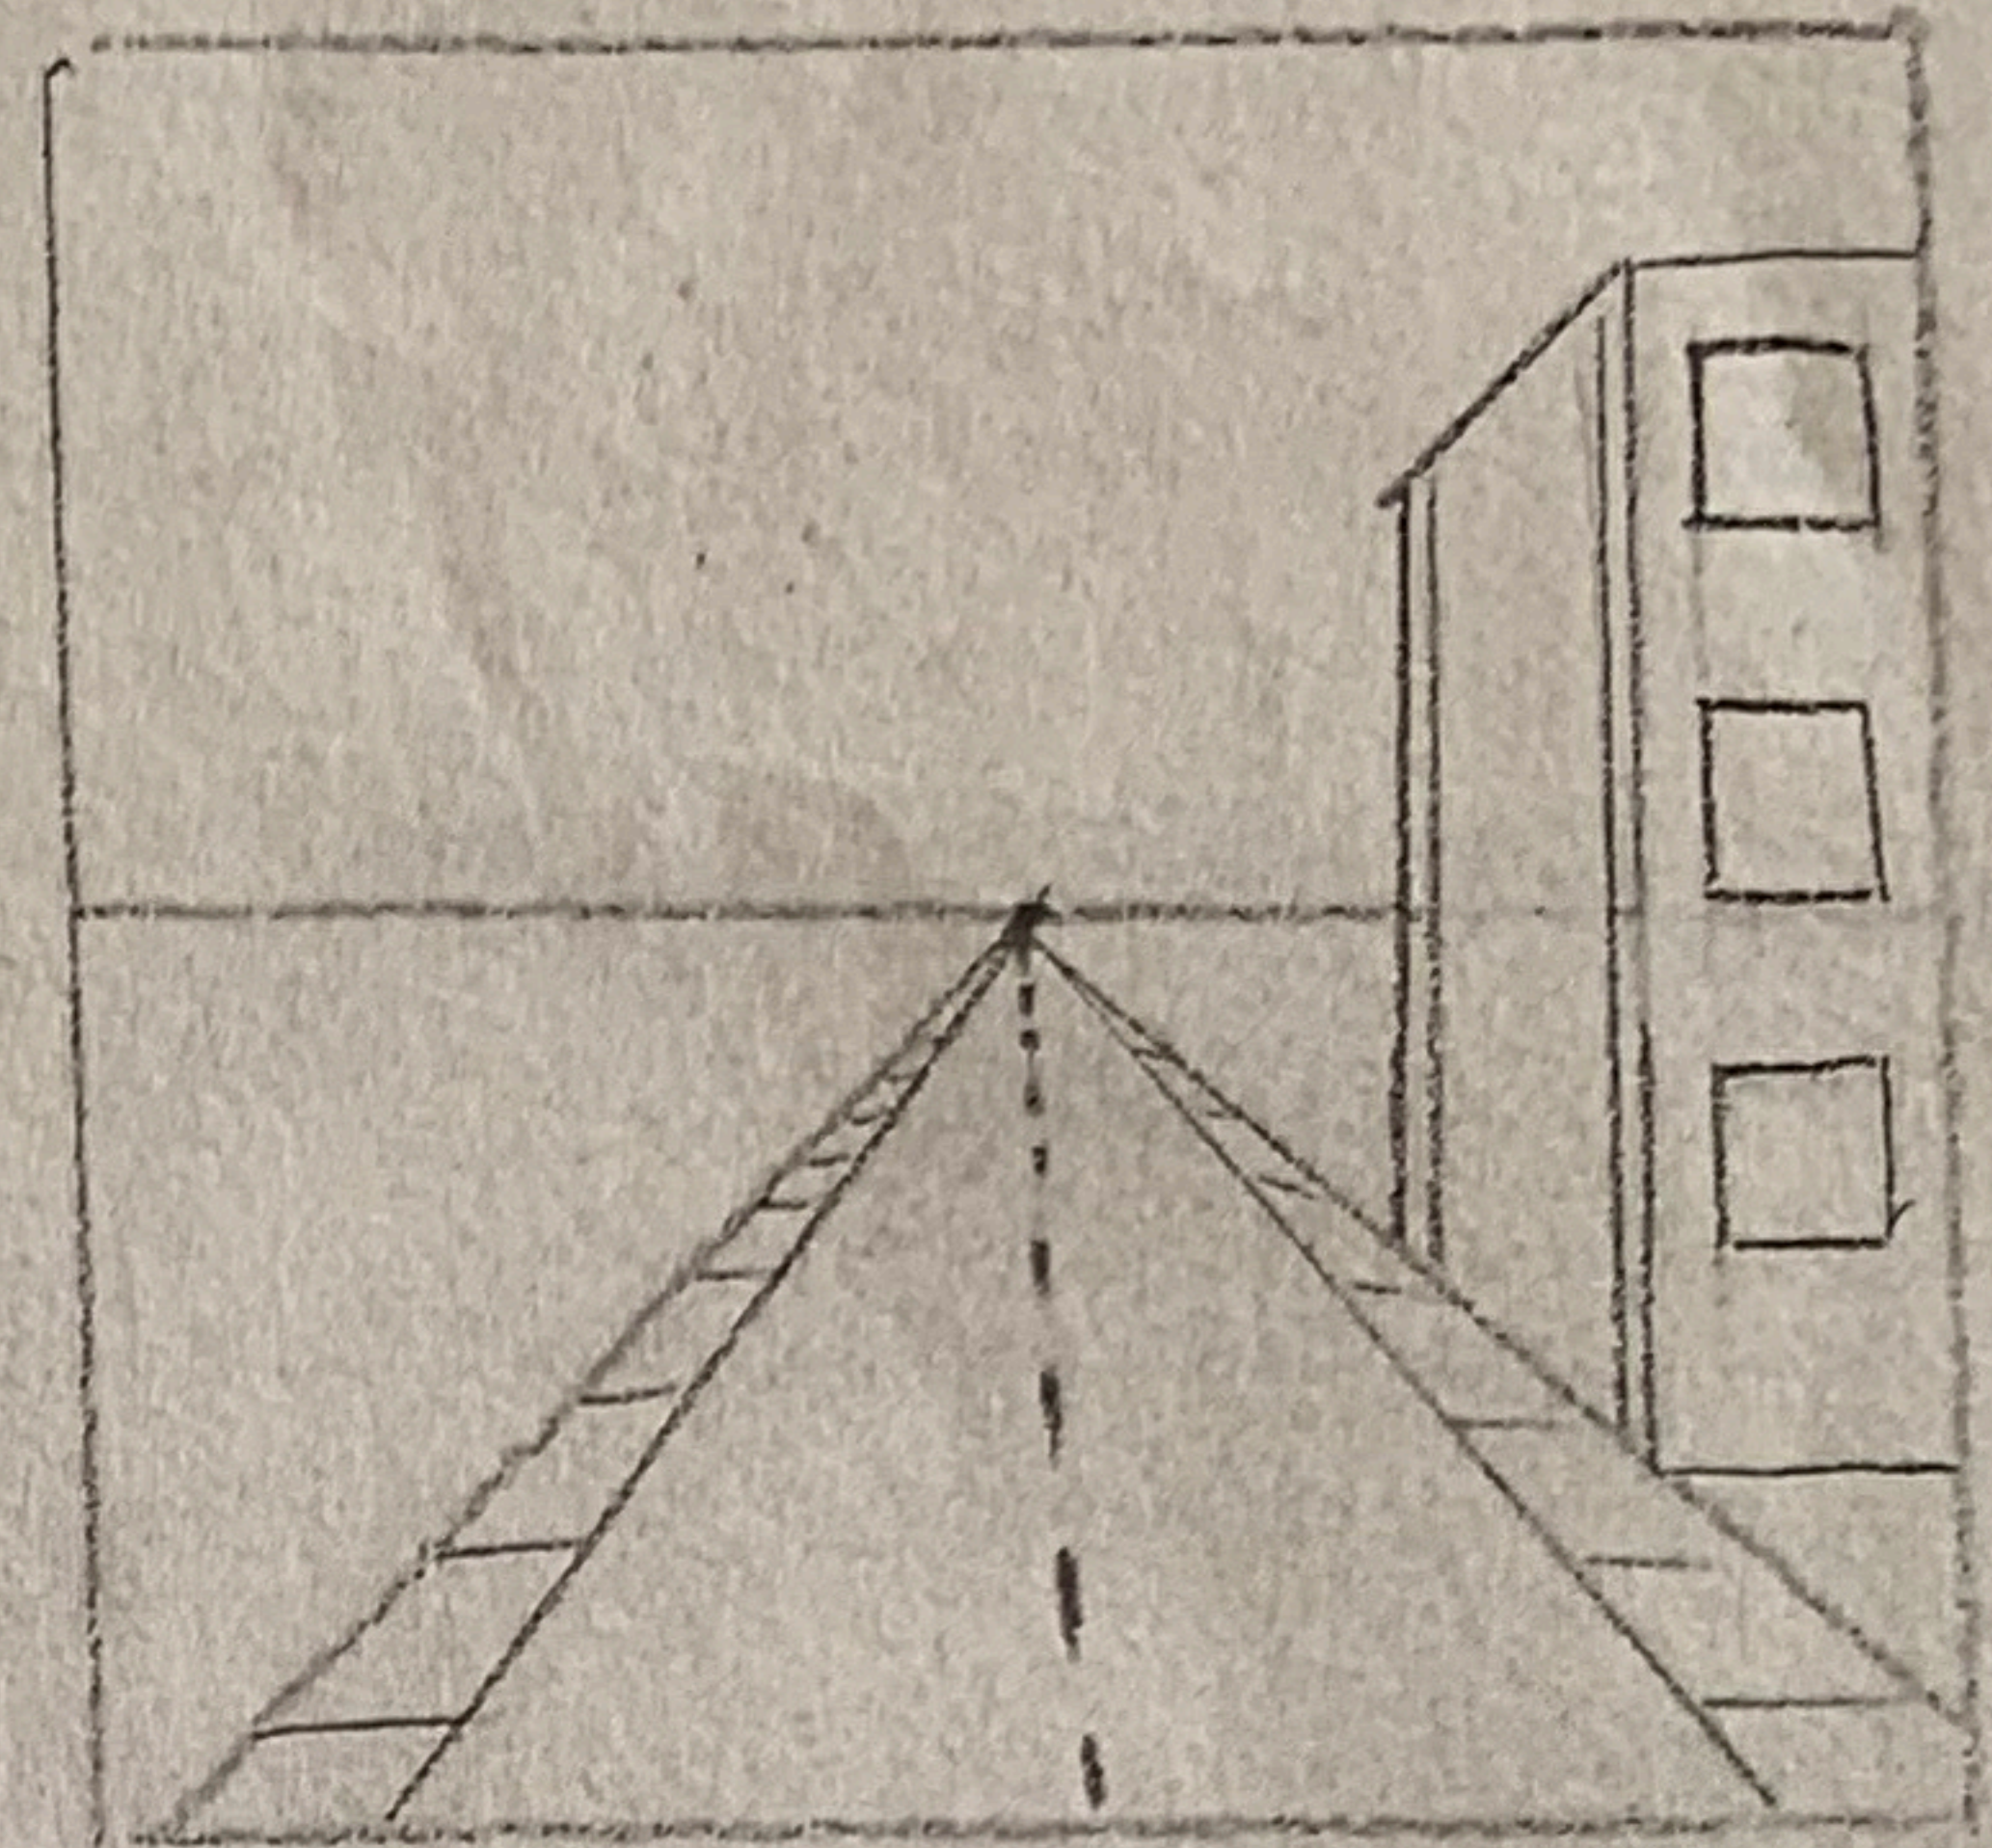

One-Point Perspective Windows

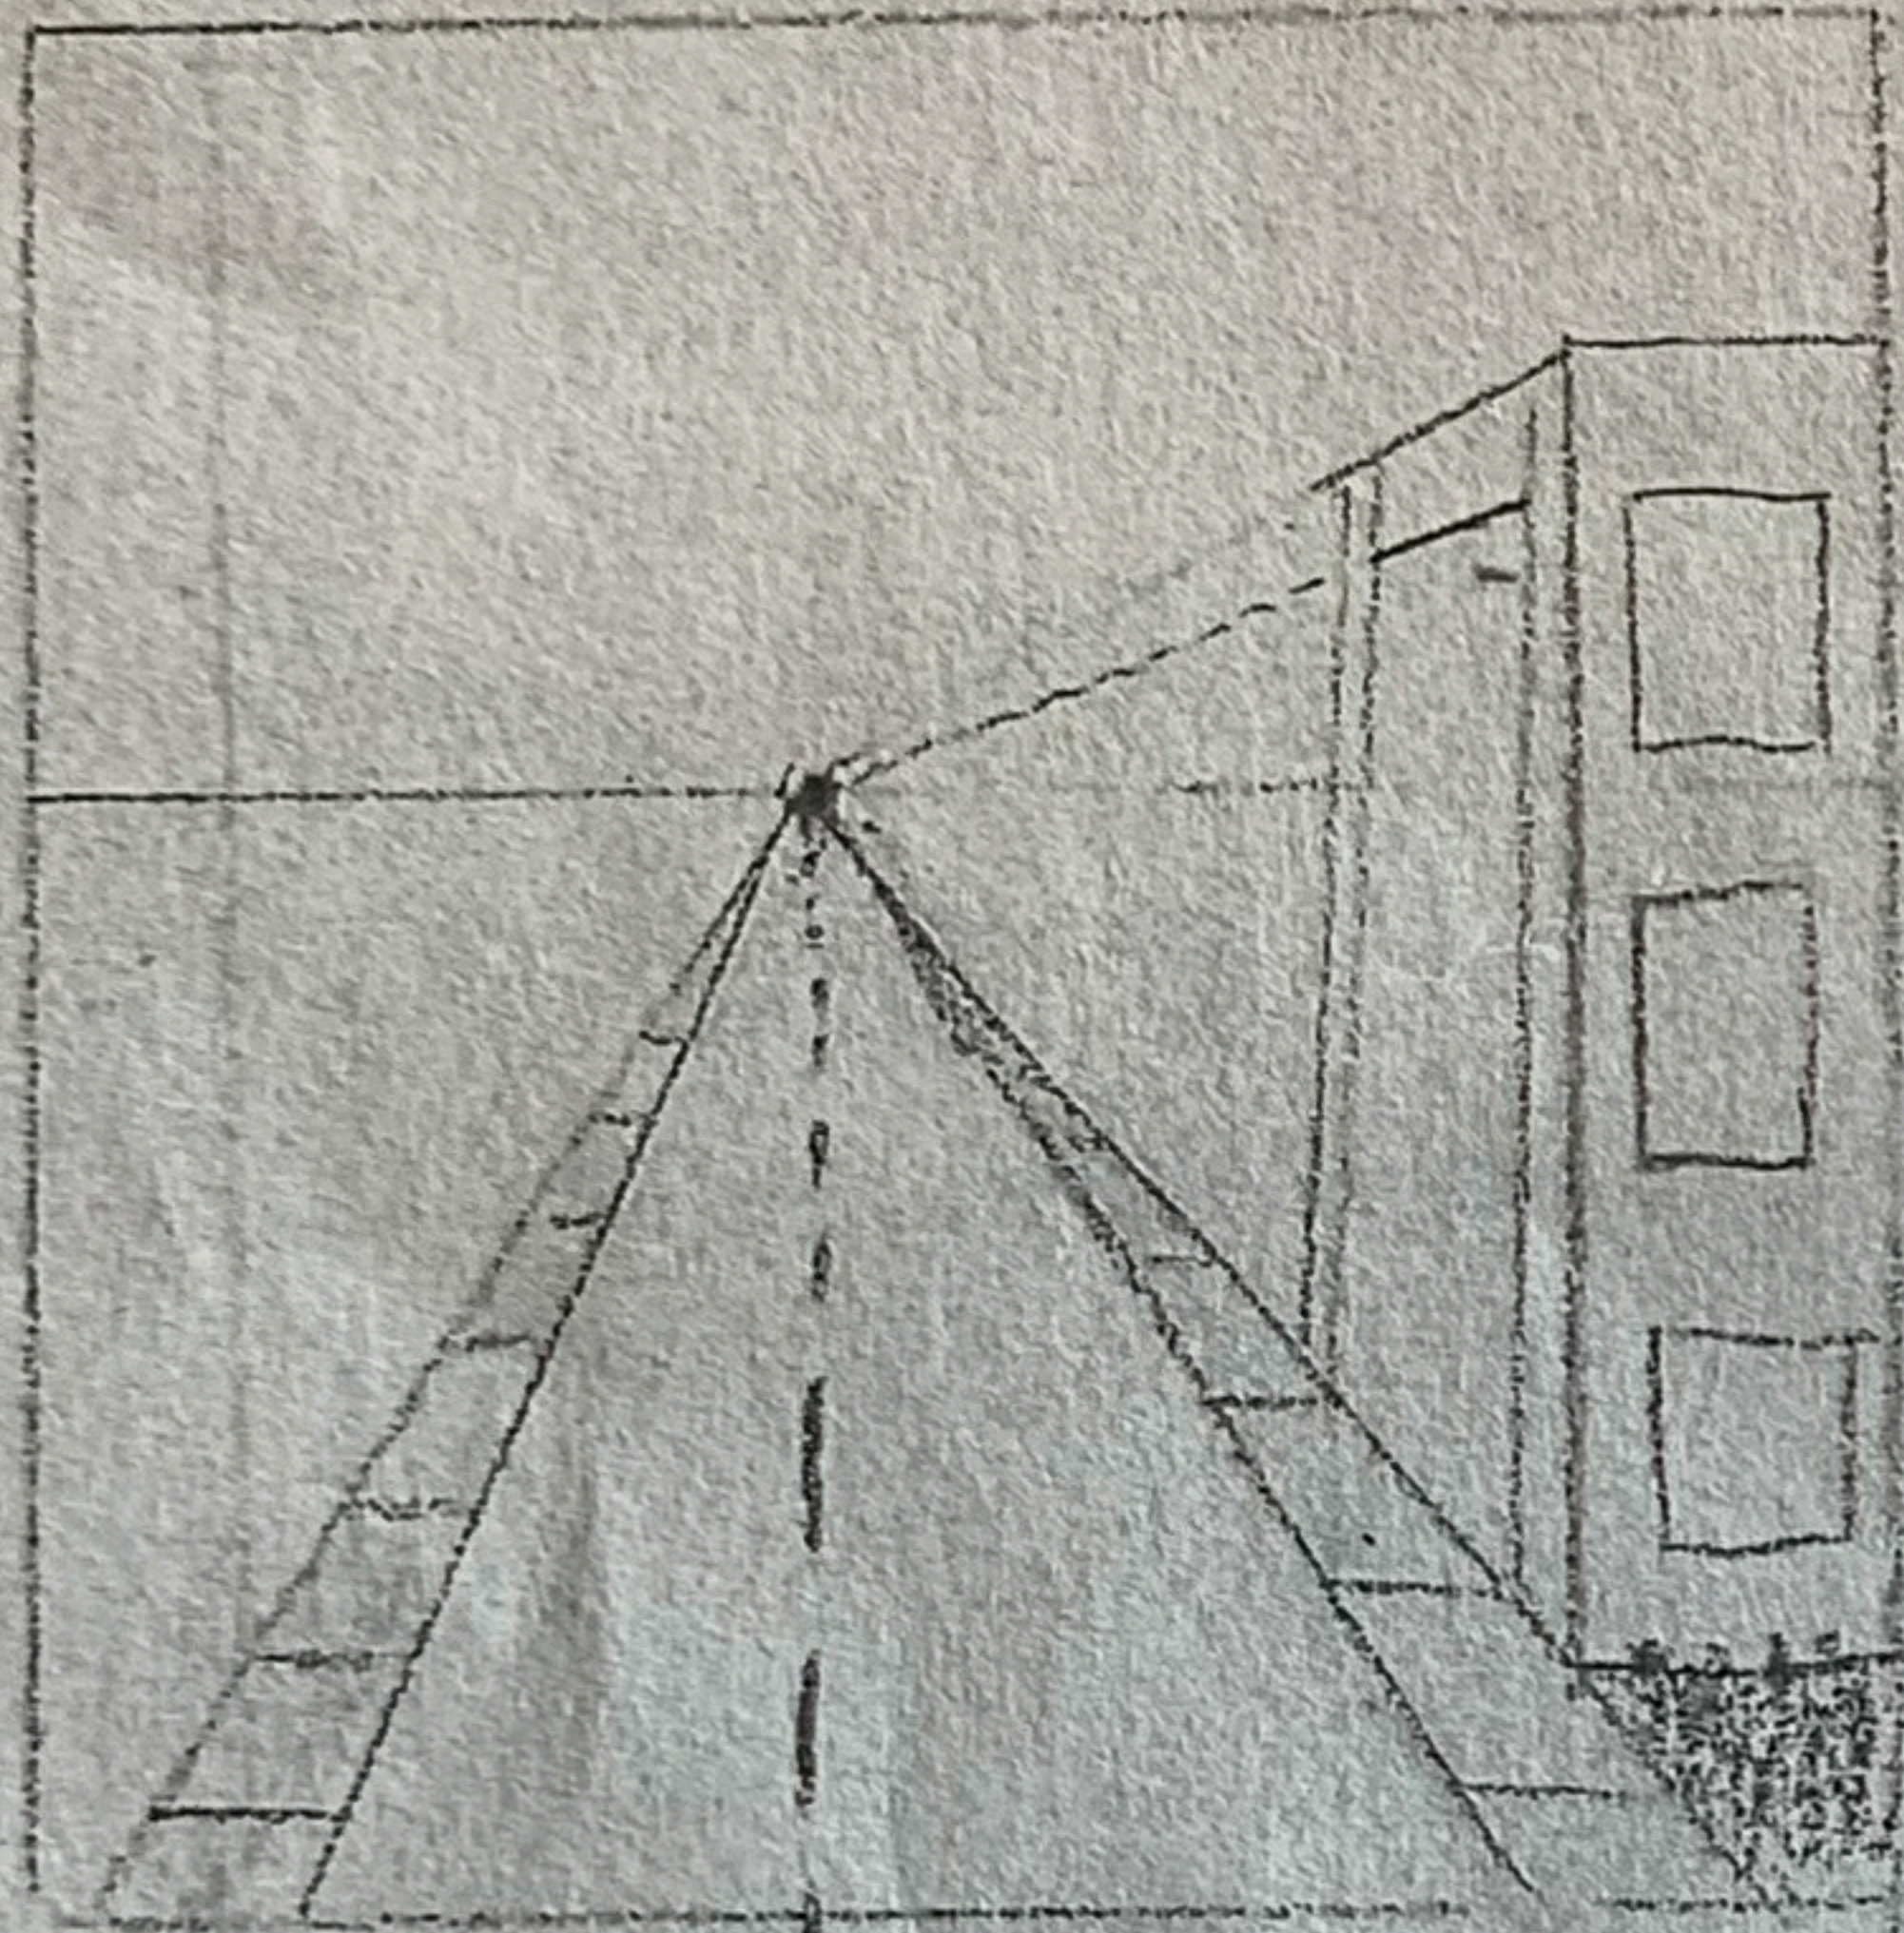

Windows on the rectangle side of your building are regular and do not need to be connected to the vanishing point. Draw with a ruler.

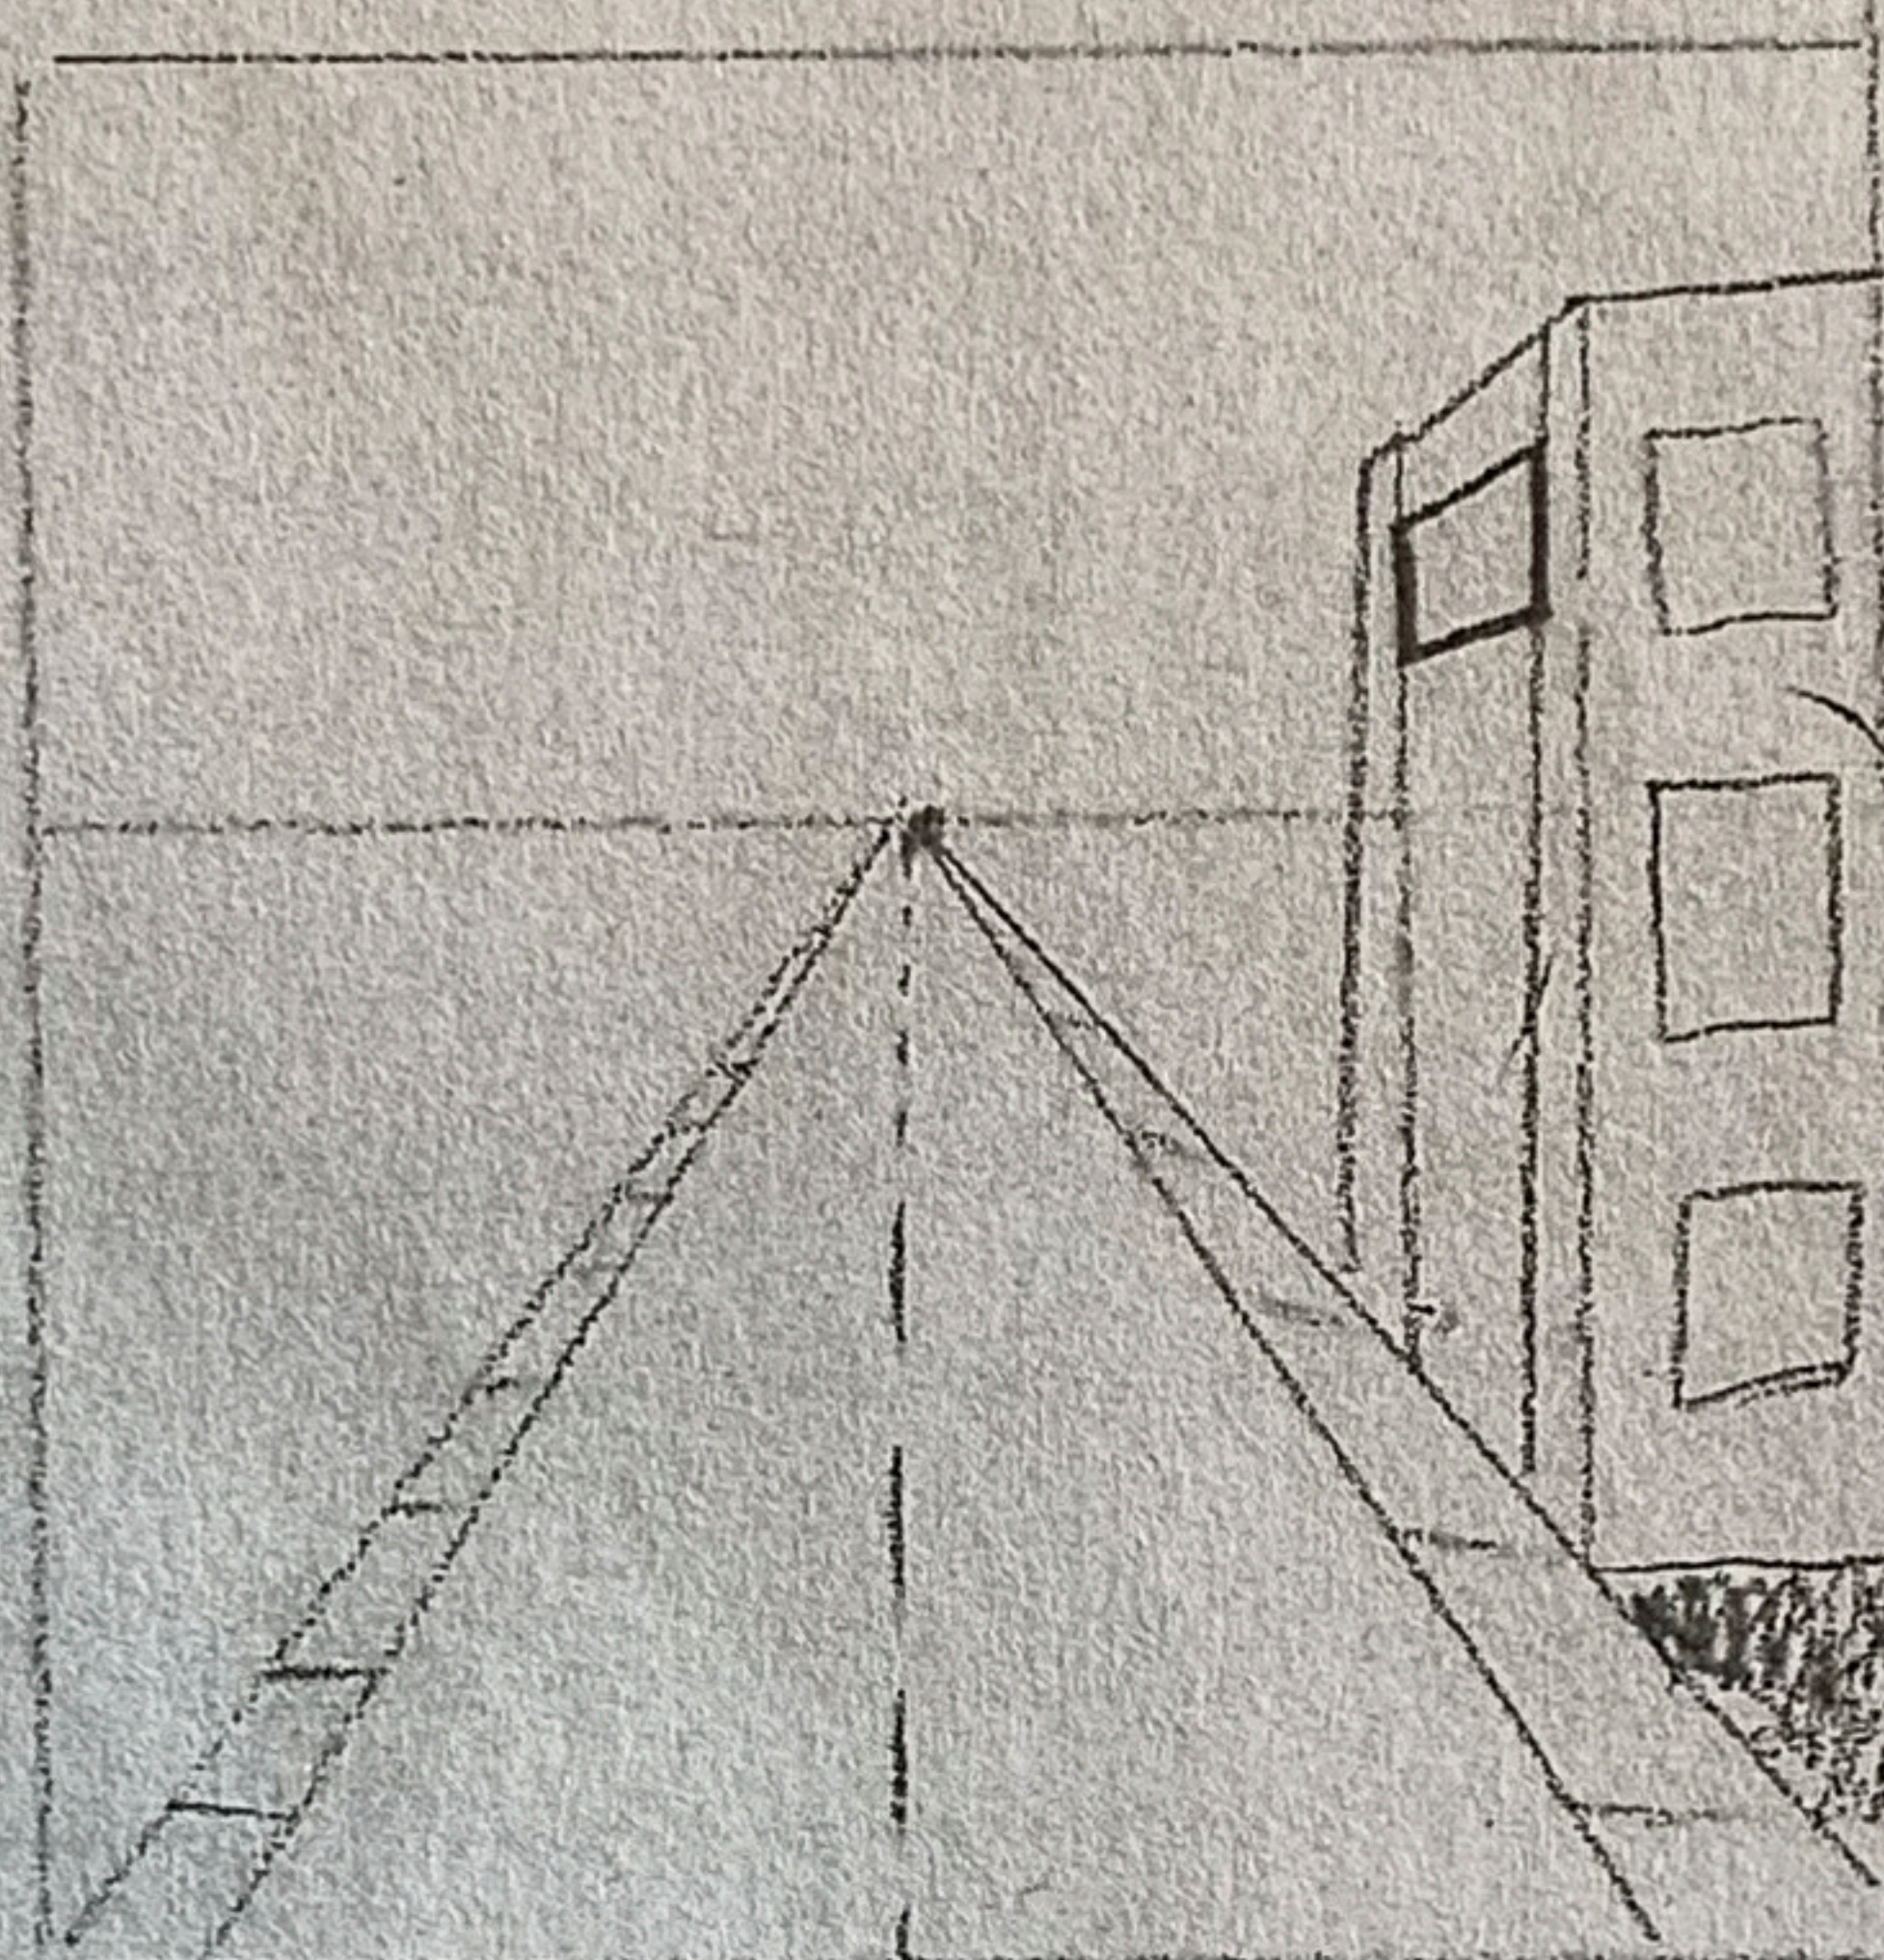

Windows on the slanted side of the building facing the street must be connected to the vanishing point

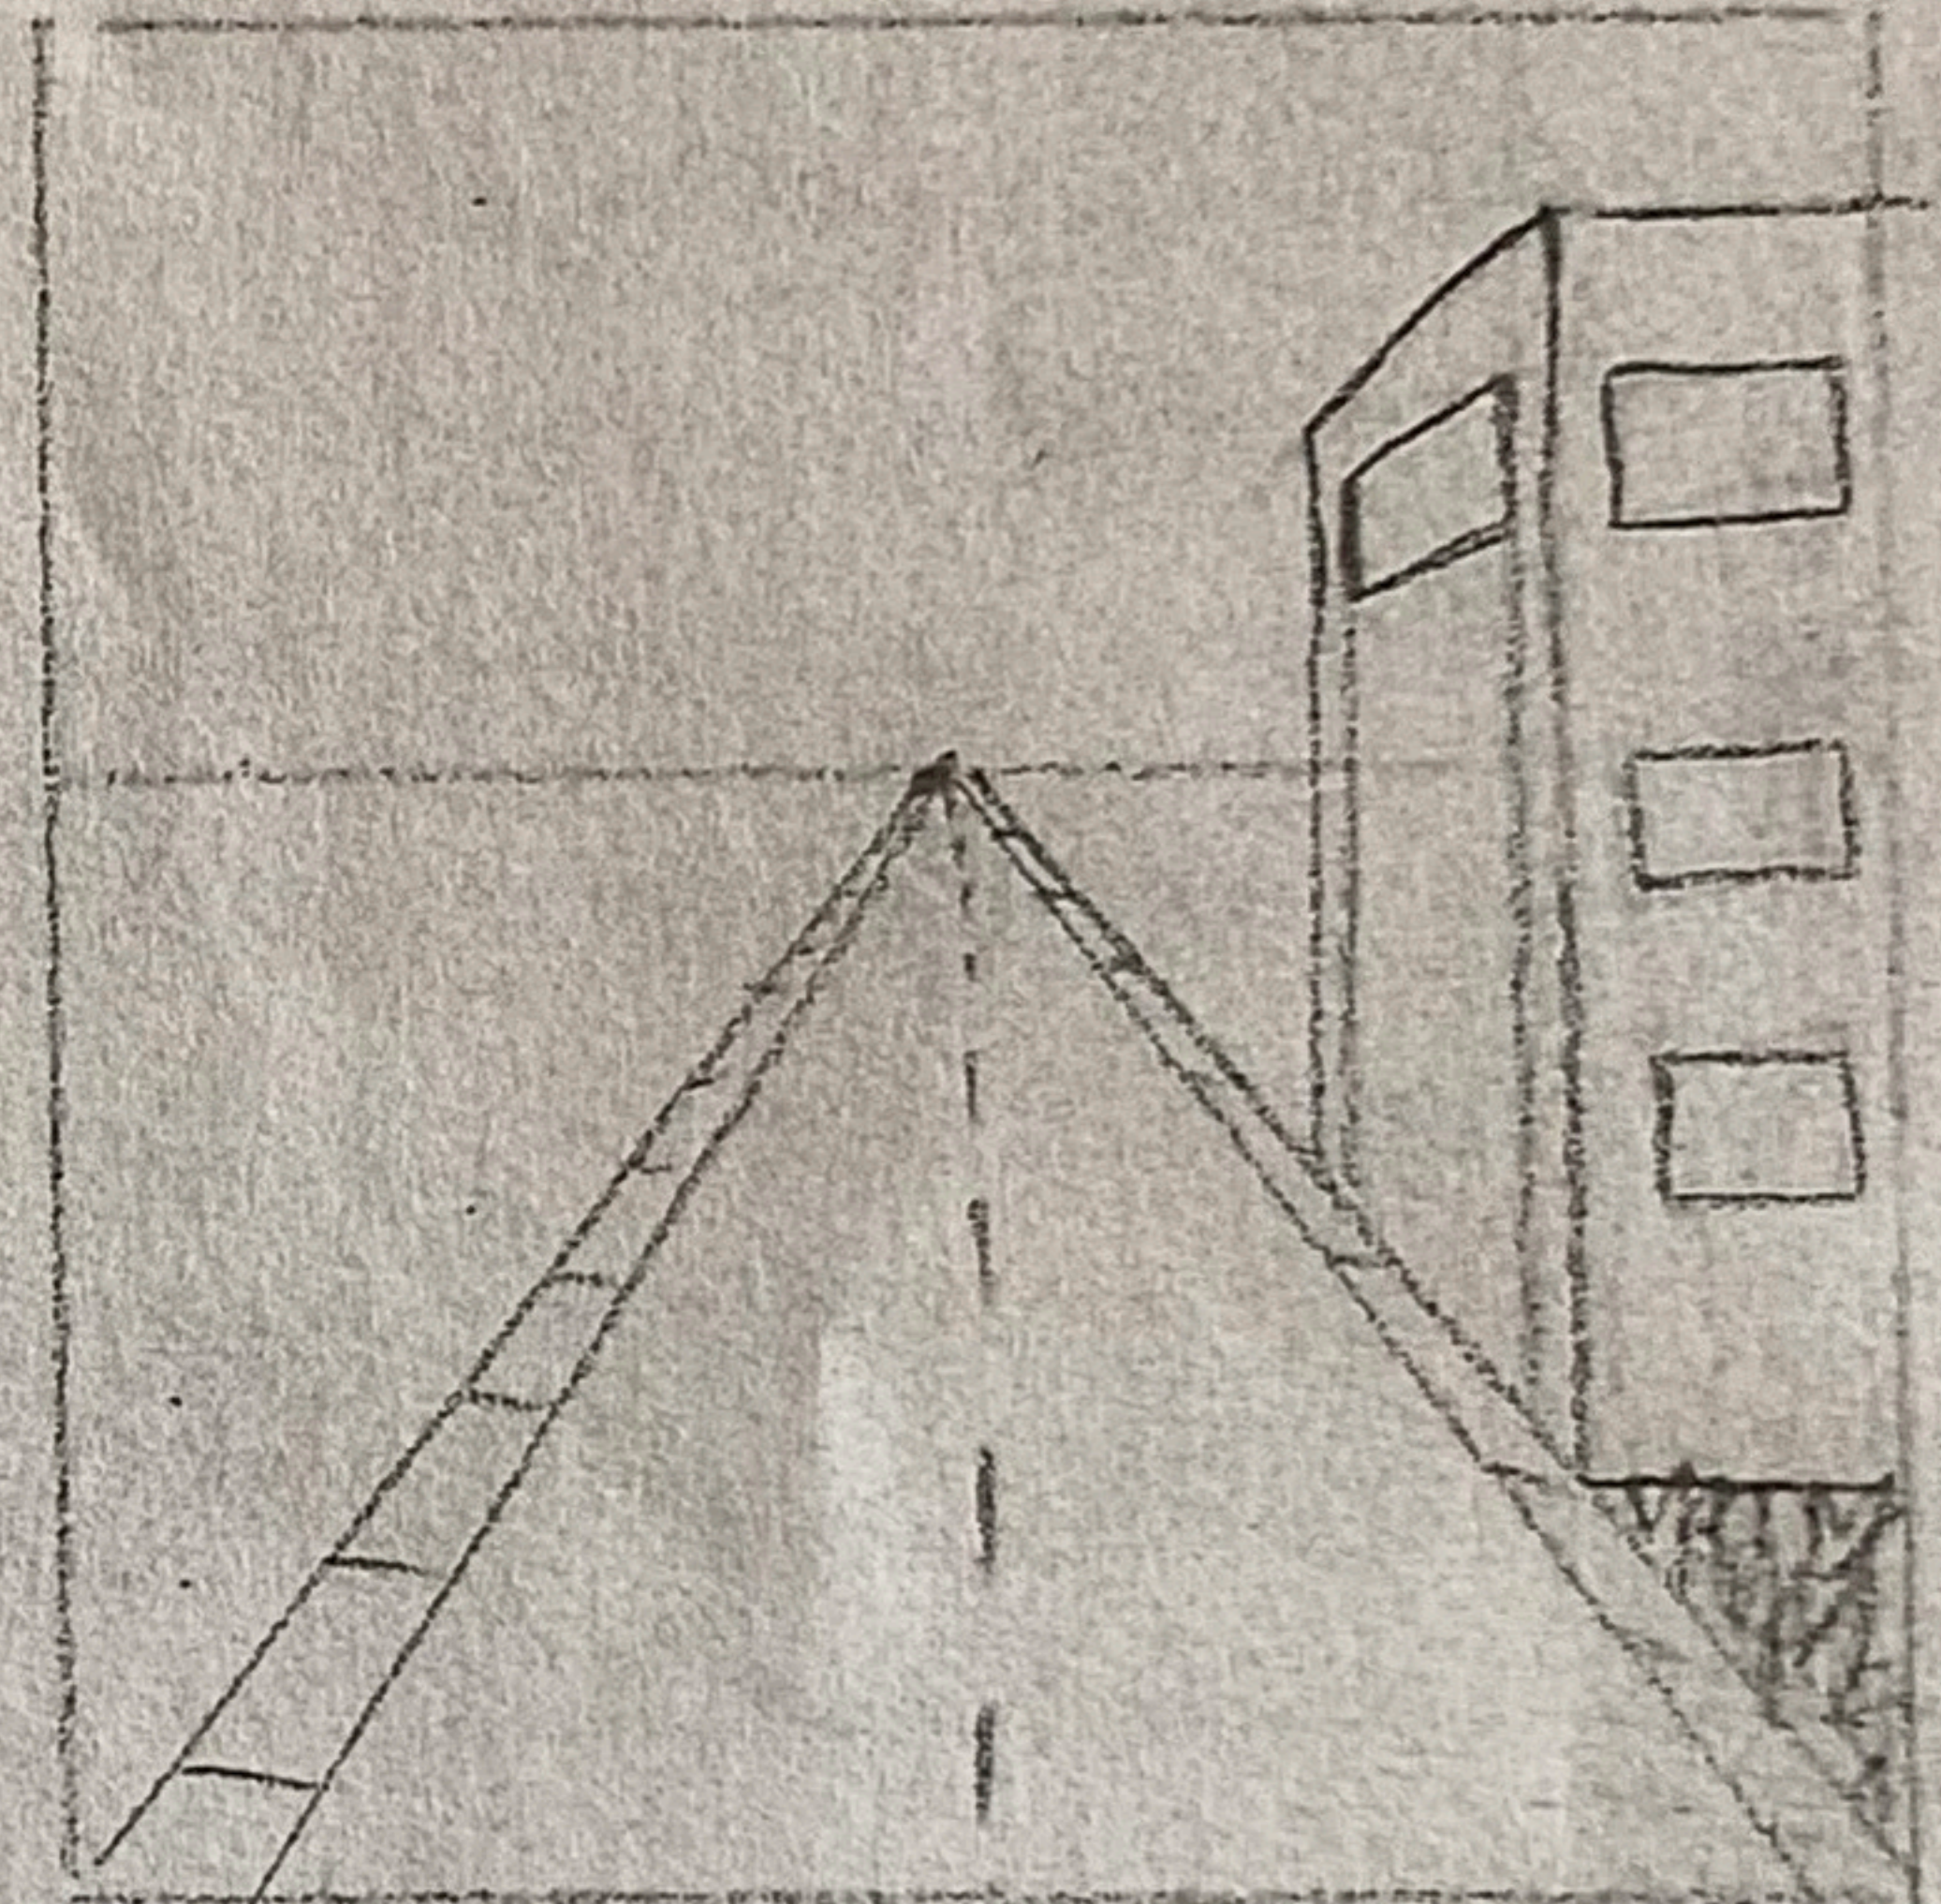

Start by drawing two vertical lines near the edge of your street-side. Draw lightly!

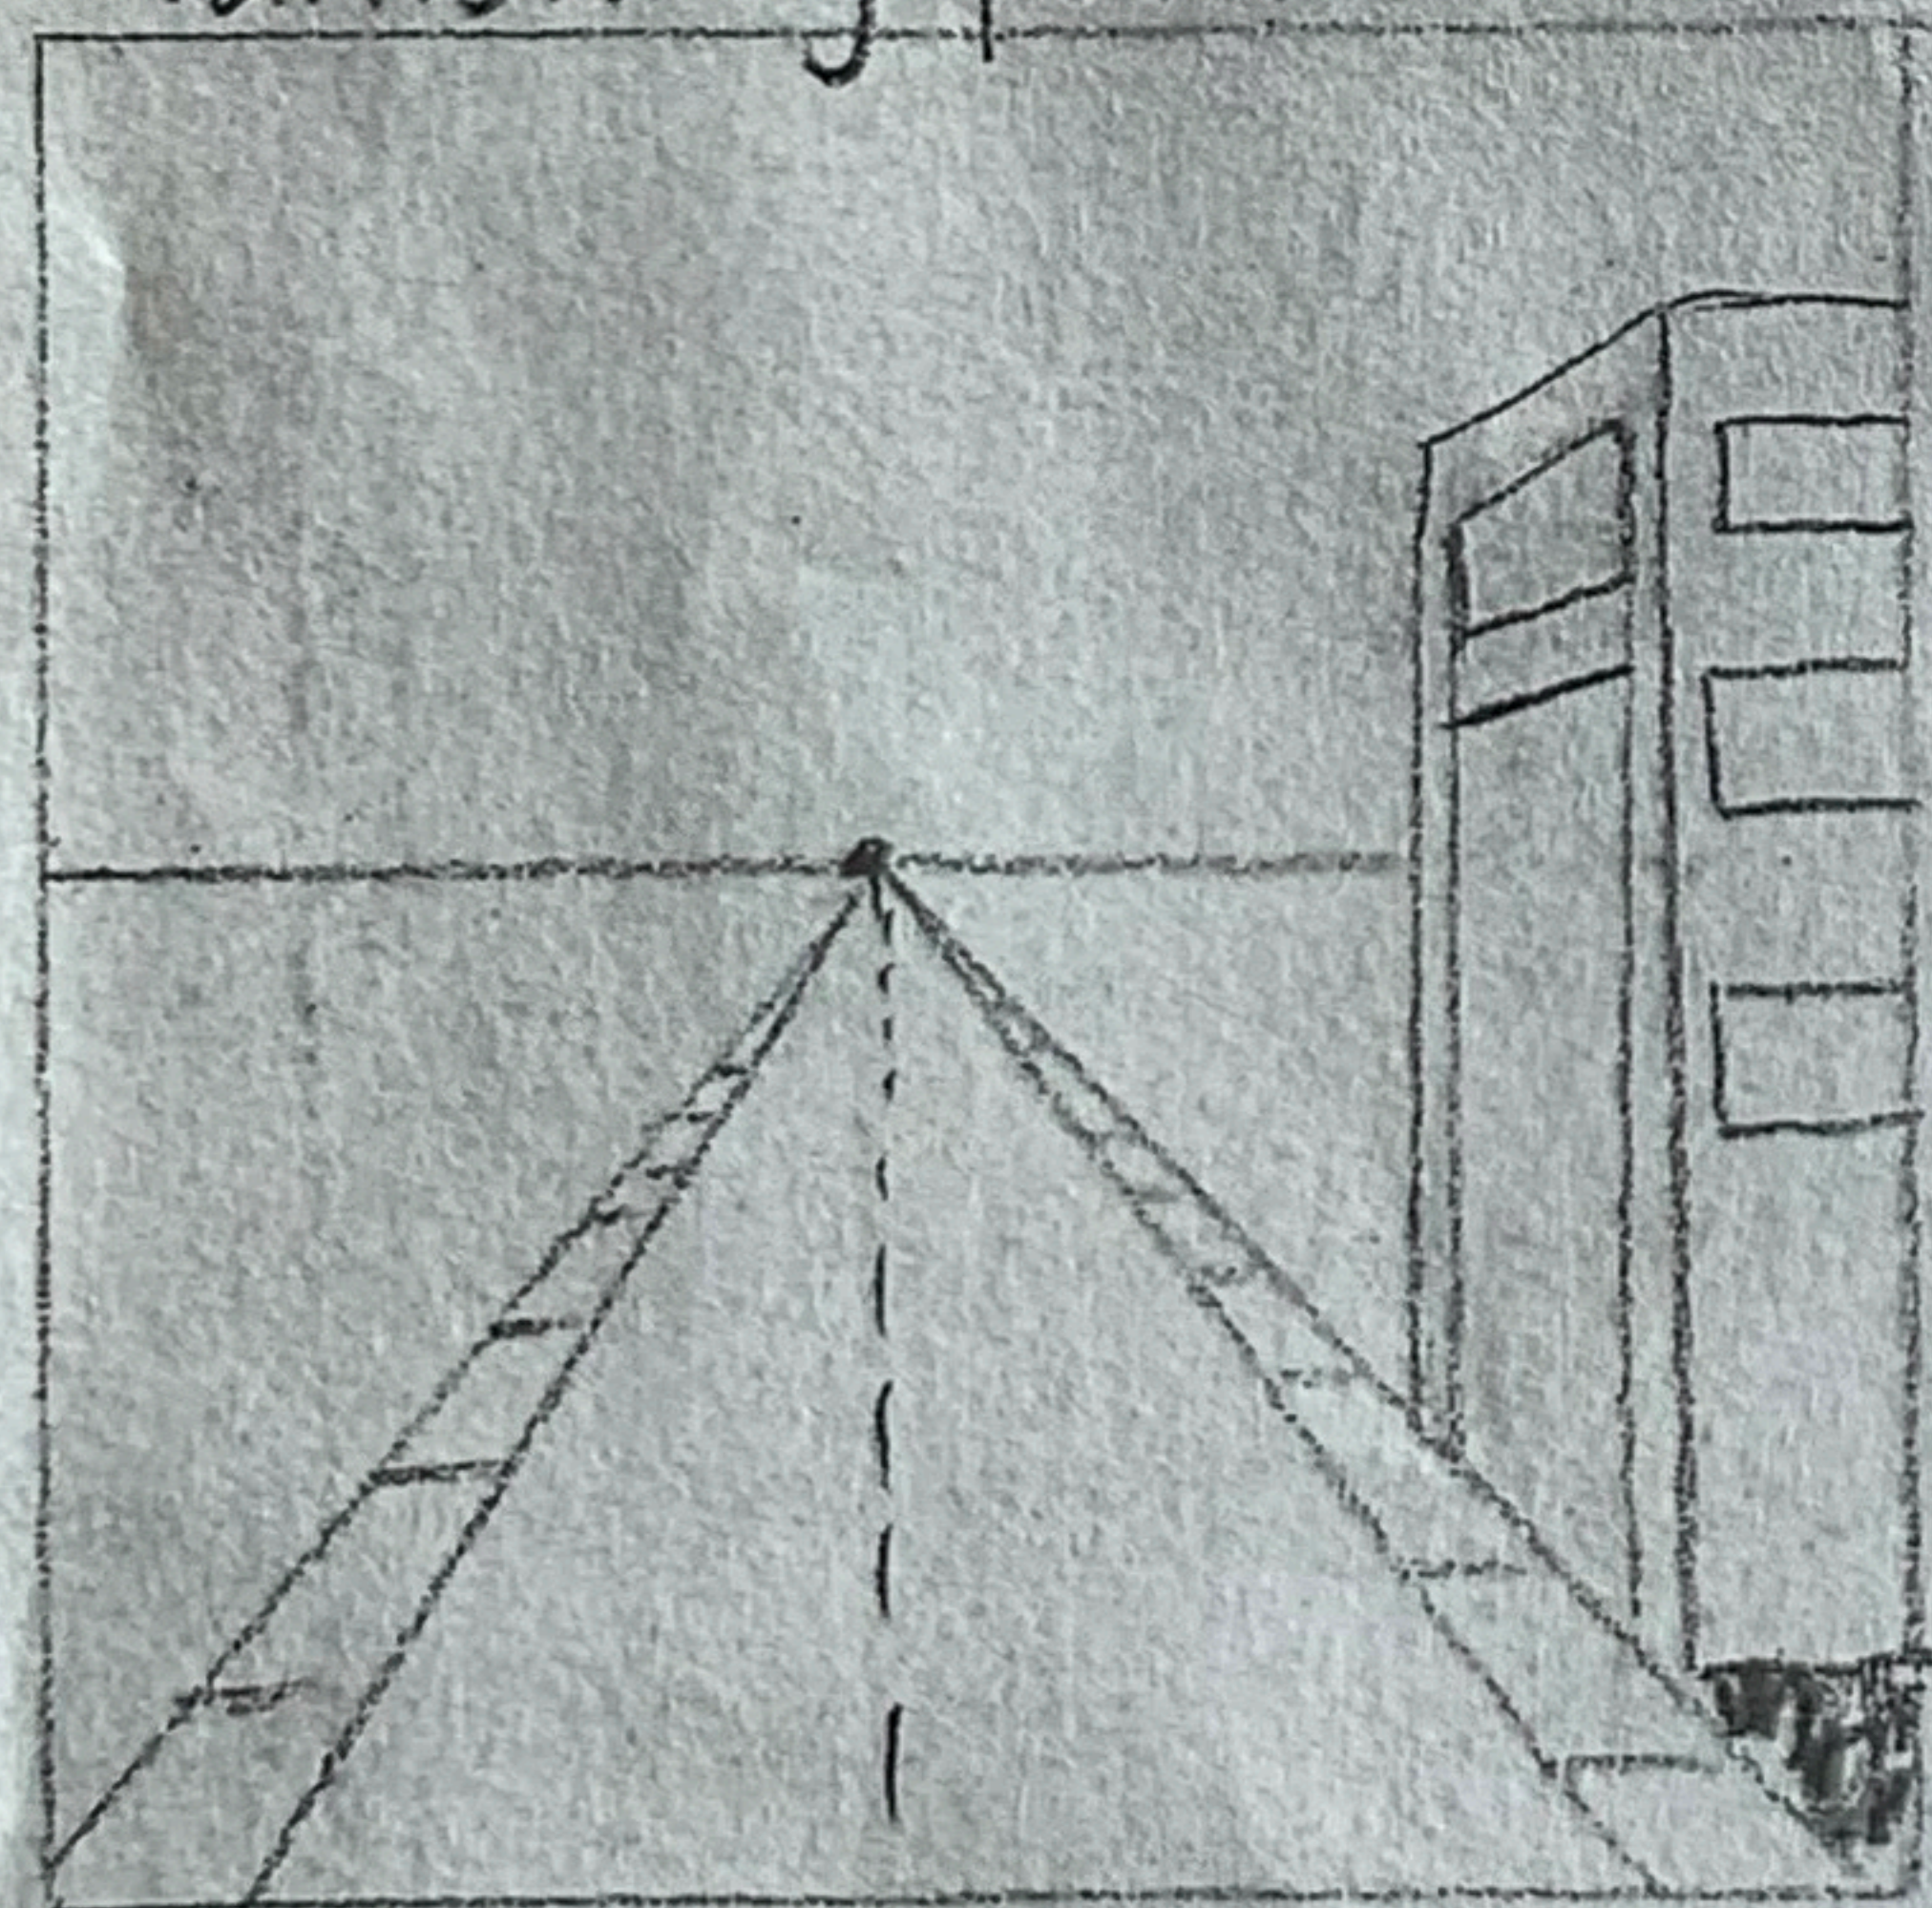

Draw the top of your first window between your two guidelines by connecting the line to the vanishing point.

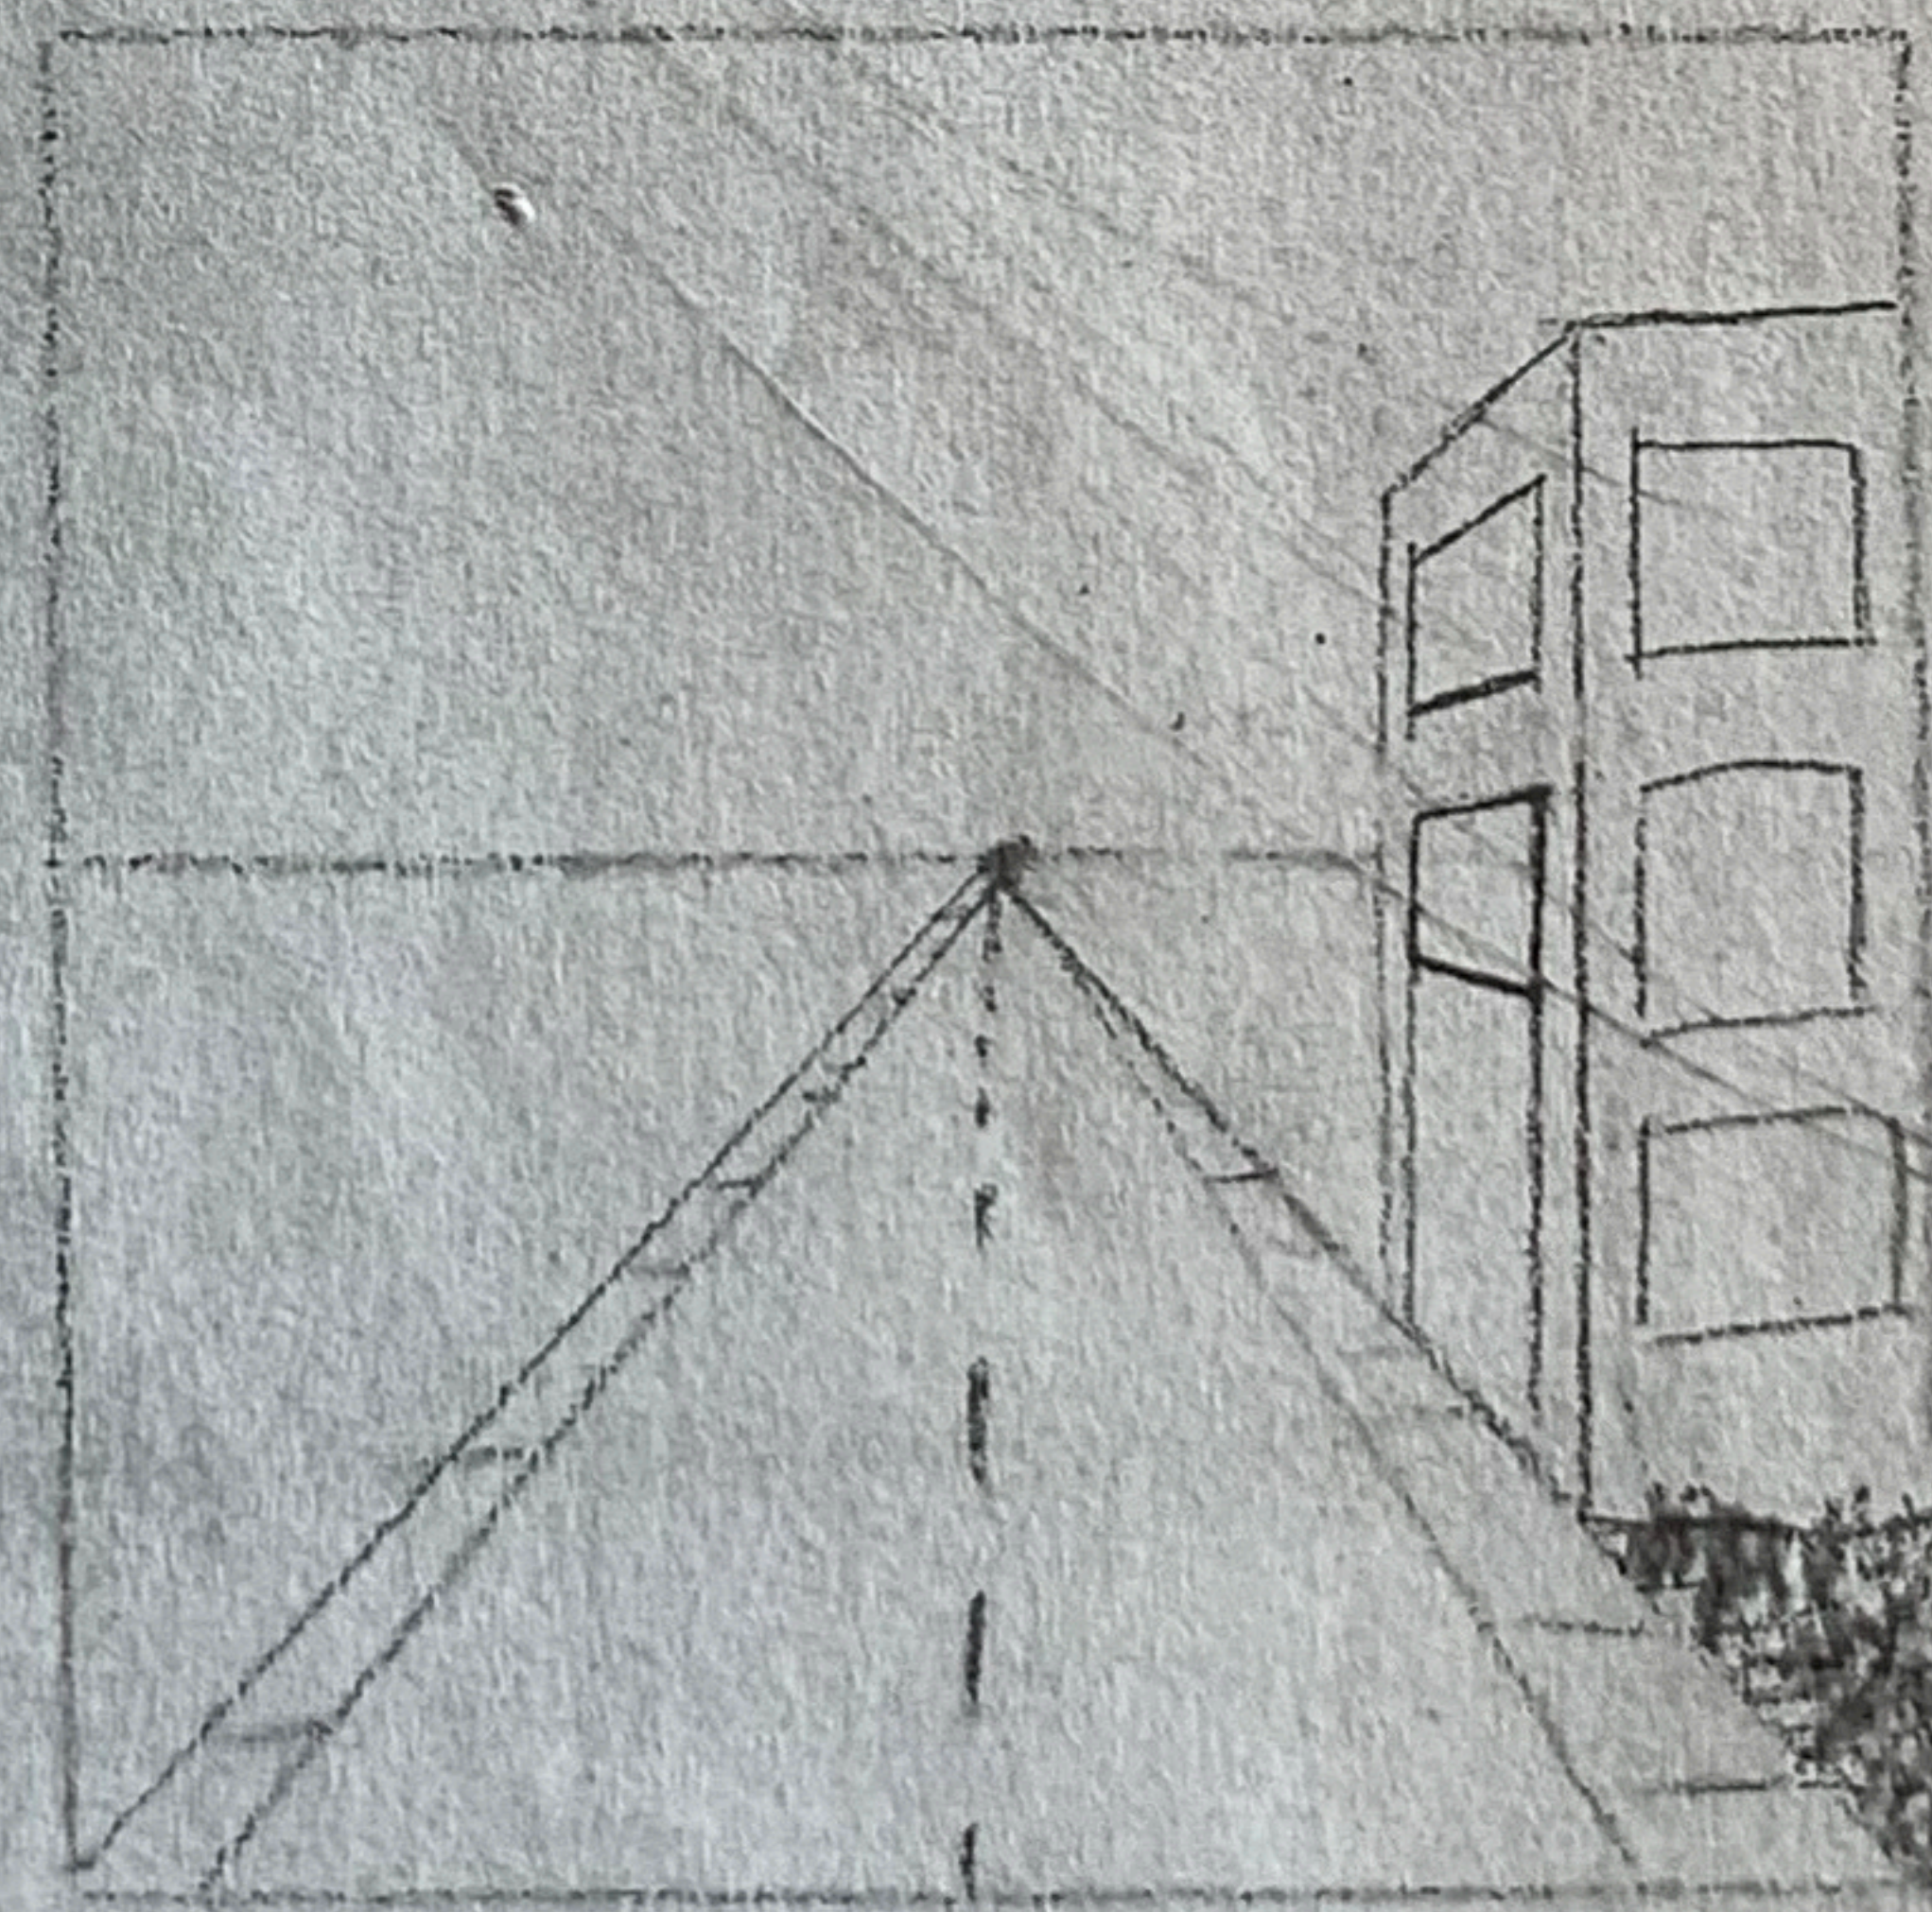

Draw the bottom line of your top window between the 2 guidelines by connecting it to the vanishing point

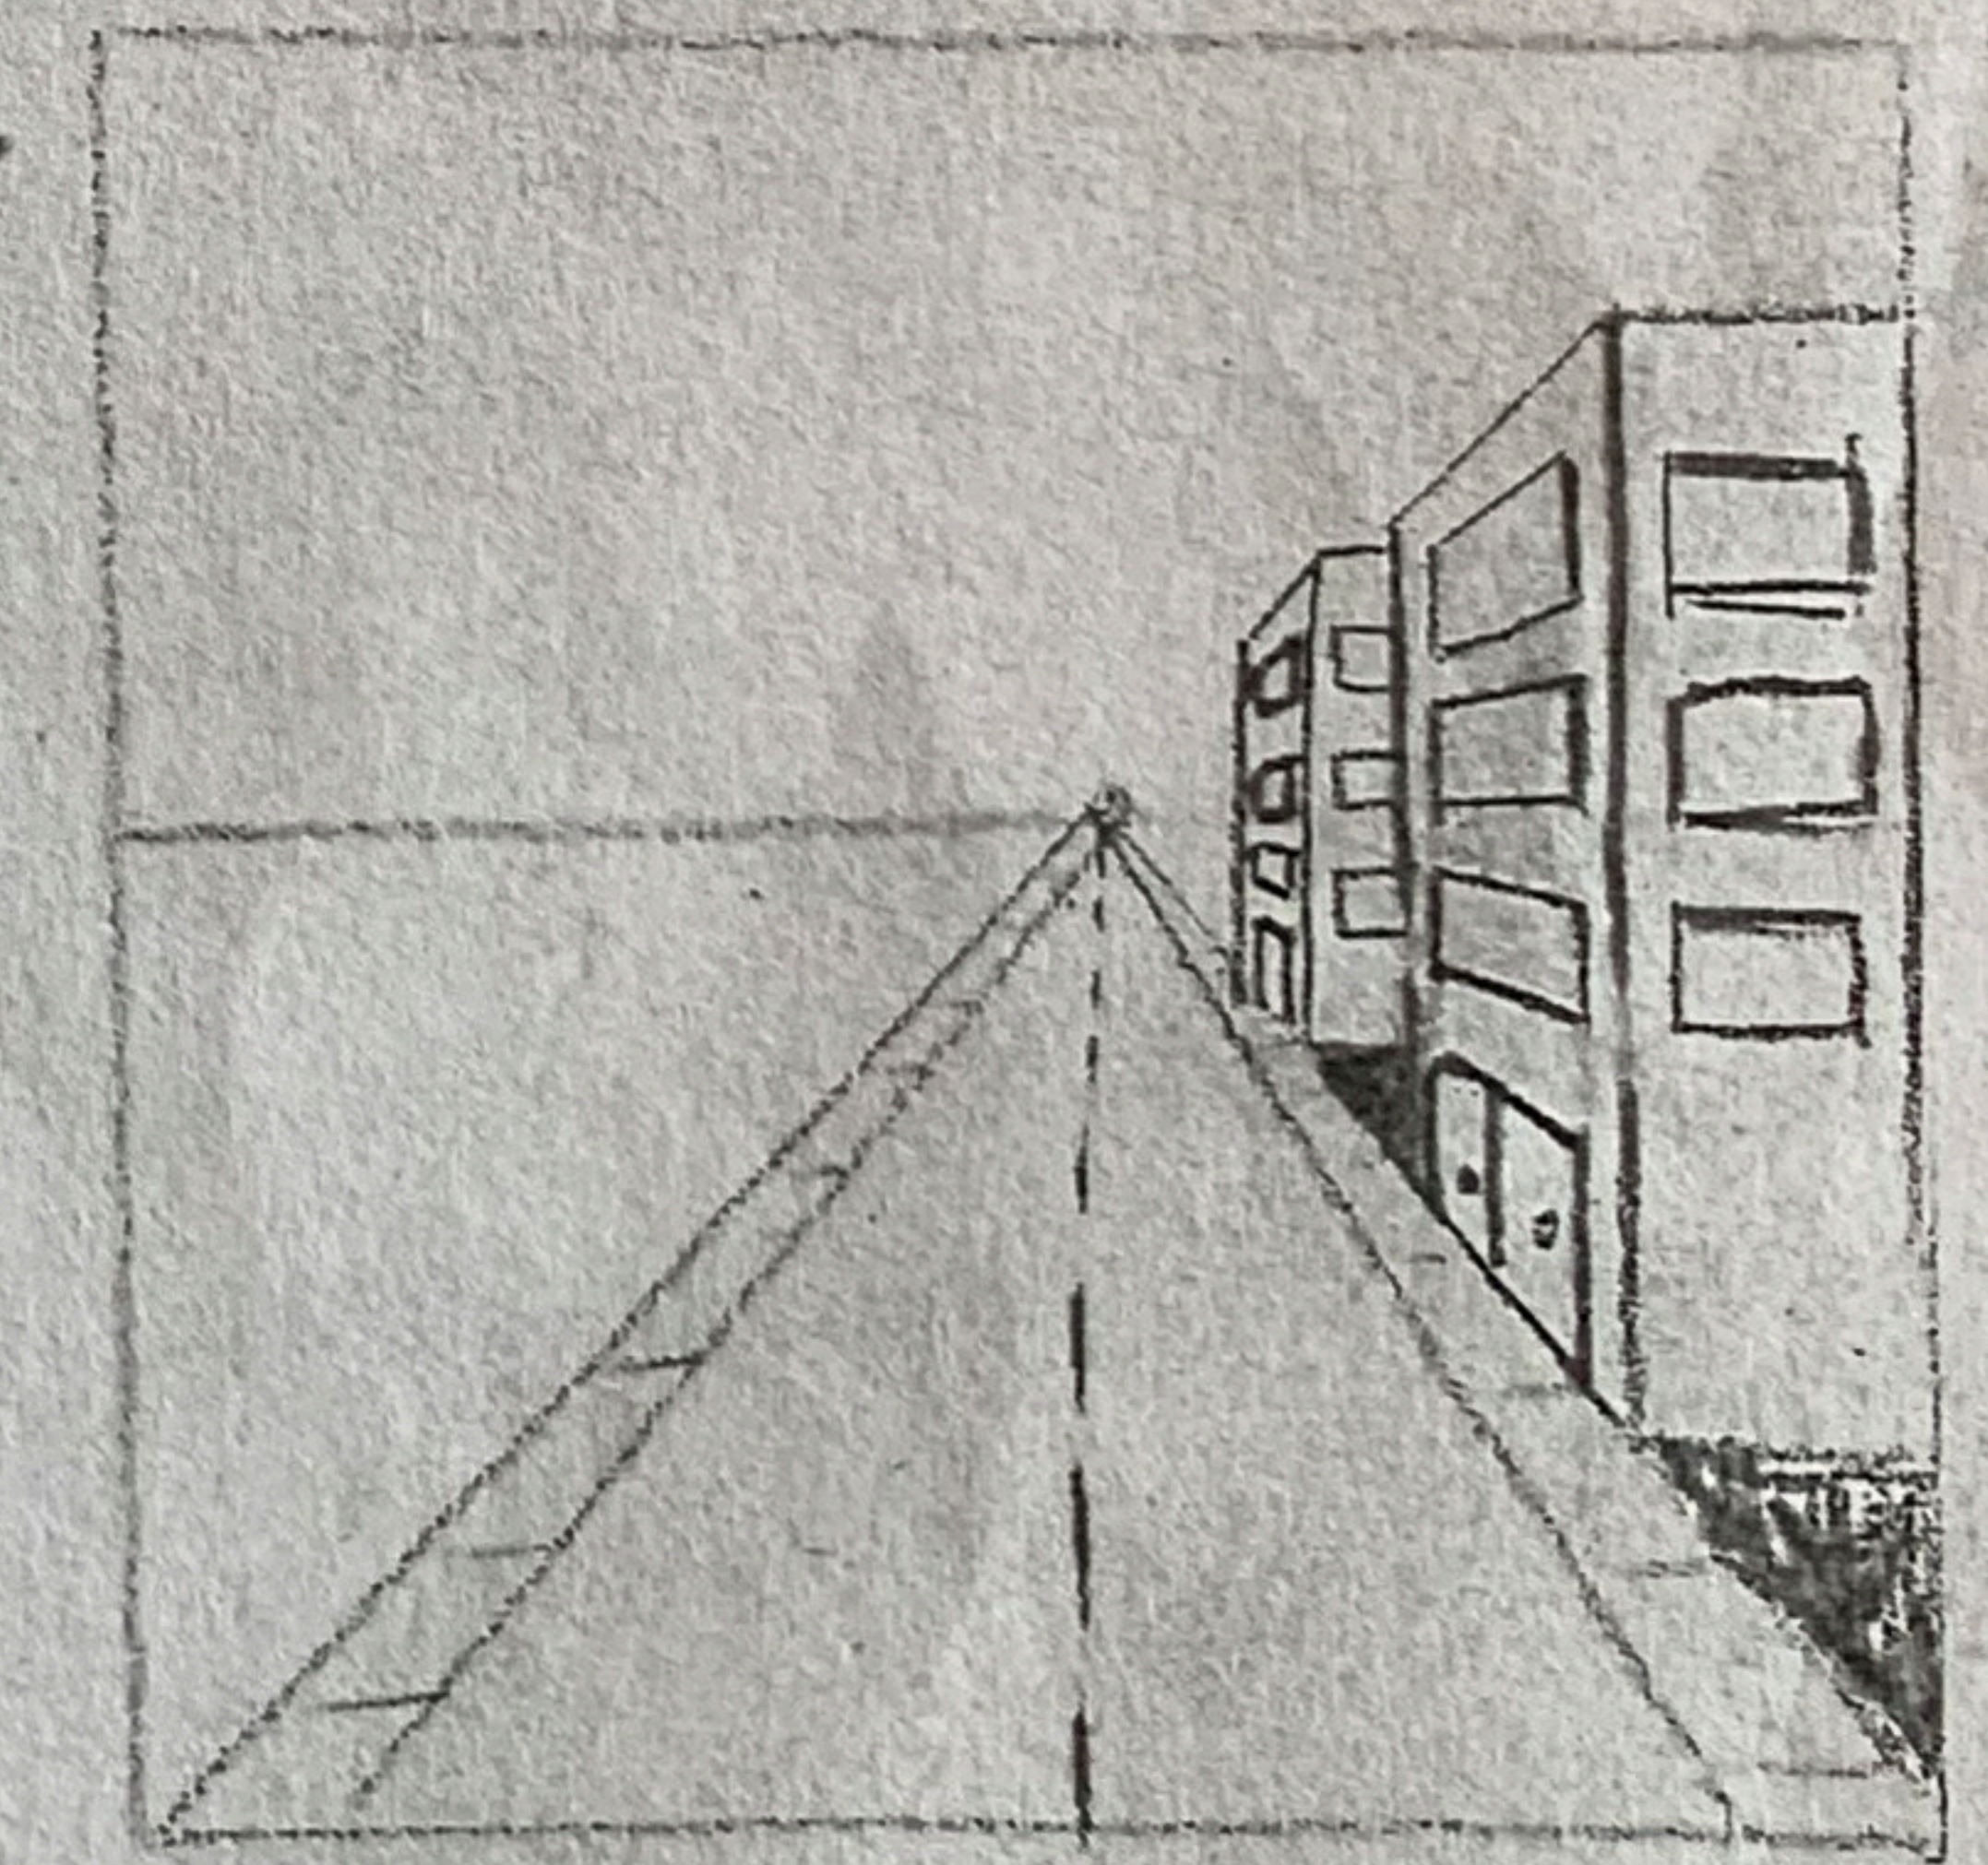

Erase guidelines above top window. This window should look like it is slanting down.

Draw the top of your second window between the guidelines by attaching it to the vanishing point.

Draw the bottom of your second window by attaching it to the vanishing point. You must use your ruler! Erase guidelines between first and second window.

Continue these steps until you've made all windows on the street side of your building and then move onto the next one!
